

Integrating Lotus® cc:Mail® in TopSpeed® Clarion for Windows™ 1.0x Applications

OVERVIEW

Applications written with TopSpeed Corporation's new development system, Clarion for Windows, can be integrated with Lotus cc:Mail using templates written by Revenue Solutions Inc. These templates allow the developer to quickly and easily mail enable their CW applications.

CAPABILITIES

Simple Messaging Interface Template

This template provides the developer with the fastest route to mail enabling an application, typically 15 minutes or less!

Your users will be asked to login to cc:Mail (or cc:Mobile), and will be able to:

- Address messages using the Address directory, and mailing lists.

- Post to bulletin boards and folders.

- Send messages To:, cc:, and blind cc: addressees.

- Set priority to Urgent, Normal, or Low.

- Request a return receipt.

- Highlight message text.

- Attach files to a message - create a file transfer system using cc:Mail.

Vendor Independent Messaging Template

This template allows for complete background operation of cc:Mail functions. All of the above functionality is available as well as polling the post office for unread messages, and much more. Create an event-notification system using the power of cc:Mail.
