

# Corel WordPerfect 3.5e Patch Notes

## Accessing the 3.5e patch new Outlining abilities

Corel WordPerfect 3.5e introduced the Outlining Bar, with its enhanced outlining functions such as setting style, indent, label type, collapsing, folding and joining topics, and comment boxes. These functions were accessed through several outlining macros which were stored in the Library file.

In the 3.5e patch, many of these macros were improved, and several new macros were added. Also, the macros were integrated into the WordPerfect application itself and are no longer stored in the Library file. In order to access these enhanced outlining abilities, it is necessary to remove the original 3.5e outlining macros from the Library file. Below are three suggested methods of removing them. Please select the one best suited for you.

The Library file is located in the System Folder:Preferences:WordPerfect folder. It's exact title depends on your language choice. United States English users will have a library file named "Library (USA)", United Kingdom English users will have a file named "Library (GBR)", Australian "Library (AUS)", and Canadian "Library (CAN)".

To access the enhanced outlining abilities in this patch, you will need to do one of the following suggestions prior to launching the patched version of WordPerfect 3.5e:

### Suggestion 1

**IMPORTANT:** This suggestion should be done only if you have no custom styles, macros, character maps, keyboards (this includes custom keystrokes), button bars, or SpeedStyles which you wish to keep.

#### 1. Delete the Library file

It is stored in the System Folder:Preferences:WordPerfect

2. Launch WordPerfect. A new library file will be created with all the old 3.5e outlining macros removed. When the Outlining Bar is selected, you will access the new outline abilities which are now part of the WordPerfect application.

### Suggestion 2

1. Drag the Library file onto your desktop
2. Launch WordPerfect
3. Under Edit, select Preferences
4. Click on the Librarian button
5. Select Open a Library from the pop-up menu above the right box
6. Locate the library file you just moved to your desktop and open it
7. Using the Resource pop-up menu, select and copy any custom styles, macros, character maps, keyboards, button bars, or SpeedStyles which you wish to keep into the new library file (represented on the left side of the Librarian dialog).

NOTE: If you need more help on moving your custom styles, macros... Please open the Cool Macros file in the Extras folder on your 3.5e CD. Just follow instructions 2-4 under Installing the Macros for each of your custom items you need to move.

### Suggestion 3

1. Rename the Library file.
2. Launch WordPerfect
3. Follow steps 3 - 7 above and copy your custom items from the library you renamed into the new library.

## Corel WordPerfect 3.5e Software Change Notice

- 

### Button Bar

- 

#### Show/Hide

Showing the button bar after a new document window is opened caused a bus error provided it was the only document window.

- 

### Conversions

- 

#### HTML Export

WP did not export its pics to JPEG' without experiencing a hang or crash.

- 

#### HTML Import

When dragging a JPEG or Gif on top of the WP Icon the program would crash during the conversion process. On a Power Macintosh it would not hang but would not display the image. It would only give a box.

- 

#### PICT Import

Opening PICT file in Draw would sometimes put extra shapes in it.

- 

### Drag & Drop

-

## WordPerfect

Drag and drop of a subscriber then updating the publisher caused a crash.

- 

Edit Menu

-

## Find Code

These codes were missing from the Find Code Dialog.

Misspelled Word  
HTML Bar

-

### Image

If the user inserted an HTML line and then (without entering a hard return) began typing text, when attempting to edit the line, a document error will occur, and if 'no' is selected the user would lose the document.

-

### Preview

HTML preview is not converting any HRT or SRT's. Thus Header Levels never change beyond the line used.

-

#### Style

When Pasteing HTML Styled Text (that was created in WP), that text becomes "script" and all other text following it, is now the color of the HTML Style.

•

#### Layout Bar

-

#### Alignment

With Smart Quotes on, the quotes and text inside of the quotes incorrectly wrap to the next line if you did a flush right and type.

•

#### Layout Menu

-

#### Hyphenation

When we have an em dash (option, shift, -) between two words WP does not hyphenate them correctly.

•

#### Macros

-

#### Tokens

"Next Bookmark", "Previous Bookmark" and "Remove Bookmark ()" macro commands did not work.

-

#### Tokens

We were missing some very important code equates in macros.

- Merge Bar

- 

Field

Field names in a comma delimited text file would not be found when using the Get Field Names button

- 

Merge

Performing a merge using a table that has a header row in it caused the first record to be merged over and over.

- 

Misc

A table data file which uses a header row for field names would not allow you to merge using the Get Field Name button. It would not recognize the header row as field names.

- Printing

- 

Print Preview

In print preview if the print button was clicked on and then the dialog was canceled, the menus became active again, although no features are accessible within the print preview layer.

- 

Ruler Bar

- 

Margins

Clicking on the margin or tab markers causes them to shift to the left on the ruler. Snap to Grid must be unchecked, and Centimeters must be selected (instead of Inches) in Preferences.

- 

Tabs

The right-most tab on the ruler bar disappeared when it was moved to the right with the mouse. It reappeared when it was dropped.

- Spell As You Go

- 

- Document Dictionary

- The document dictionary will not recognize a plain quote as the same as a smart quote.

- 

- Misc

- Italian speller marked common Italian words as misspelled -- colore, uso, bianco, cosa, etc. --

- The SAUG pop down list showed the word exactly as you typed it if the suggestion was chosen the marking would disappear for a very short time and then reappear.

- 

- Status Bar

- 

- Display

- When monitor resolution was changed the Status Bar was not positioned correctly.

- 

- Style Menu Attributes

- 

- Misc

- When using Uppercase/Lowercase/Initial Caps, with an align code as the last selected item, everything from there to the end of the document was affected.

- 

- Tables

- 

- Split/Join Cells

- In joined table cells, setting first line indent caused insertion point misplacement.

- 

- Tools Menu

- 

- Speller

Duplicate words were not being detected if the word was not in the dictionary.

-

Speller

The word 'resistent' was removed from the Dictionary(USA) since we could find no reference to it in any other dictionaries we will assume it is a misspelling of resistant.

-

Speller

Spell-Check didn't respect Smart Quotes on.

•

Preferences

-

Quick Correct

Auto Indent would check but when returning to the dialog the check would be missing. The feature still worked

•

Outlining Bar

-

New Commands

Edit Topics: Added options for appending or prepending text. To or from a topic at a given level. Optionally includes subtopics.

-

New Commands

Filter Topics selects topics at a given range of levels, and copies them to a new document.

-

New Commands

Search topics selects topics containing given text, and copies them to a new document.

-

New Help Commands

Four new help menus

-

#### New Help Commands

Commands that create a Quick Reference card, a command overview, and a new demo.

-

#### New Help Commands

Help prompts for every command.

-

#### Enhancement

On/Off switch deleted - enhanced outlining is always "on," with specialized keystrokes

-

#### Enhancement

Outlining Utilities run faster

-

#### Enhancement

Sort Topics now sorts all topics at a given level, rather than just topics following the insertion point at a given level.

-

#### Enhancement

Tab command will not move a topic more than one level right from its parent, no matter where insertion point is.

-

#### Enhancement

Tab command tabs a topic without moving its subtopics if the insertion point is to the right of all text in any line - no longer does this if insertion point is immediately to the right of the topic label.

-

#### Enhancement

Join Topics maintains correct structure.

-

Enhancement

Outlining mode menu commands display the outlining button bar, if a button bar is showing.

-

Enhancement

Buttons added for Outlining Features and Comment Box

-

Enhancement

Count Topics is much faster.

-

Enhancement

All topic-specific commands finish with insertion point in "home position" - just to the left of beginning of topic's text.

-

Enhancement

Changing existing indents does not change current mode.

-

Enhancement

If you tab a topic past level 8, that label is selected when the alert dialog is posted.

-

Enhancement

Presentation tools deleted.

-

Enhancement

Help strings added to Status Bar.

-

Enhancement

Several control keys mapped for easier access to commands.
