Chapter 1

CreaTV-Magic-WB

1.1   CreaTV DeSiGn

                              CreaTV – DeSiGn Icons

          Disclaimer
                              Disclaimer and legal stuff

          Installation
                              How to install

          Acknowledgements
                              just talking...

          Needful Tools
                              Advisable to look for...
    Overview

          Who am I ?

1.2   Disclaim it...

                  CreaTV – DeSiGn Icons are giftware. These tiny artworx may be
        distributed freely as there will be no profit made higher than,
        let's say, about 6 $ or the equivalent value in other currencies
        for a disk this is included in.

        I think, that's enough I could say against Public-Domain-Pirate-
        Sellers.

        Maybe it's a kind of rassism, but I don't like people, which wants
        to get rich with the work of others.

        All parts of this library and the documentation must be complete.

The distribution of single parts is not allowed.

Arts and documentation must not be changed in any ways, except of
translating this document in a better english language, because
that is not my native language, and school-english has stopped
about five years ago...
The repacking of this distribution with different packers is,
however, allowed.

Permission is granted to include this archive in Public-Domain
collections, especially in Fred Fishs great Amiga Disk Library
(including CD ROM versions of it).

I'm really not responsible for misuse, or damage. Essentially
there can't be any danger, but who knows...
But, for instance, this distribution is not ready for use in
microwaves or washing driers (I just wanted to say...)

If you really like it, I would be very pleased about donations
like postcards, contacts, flowers, a new car, a nice house...

The design of the Icons was drawn being aware of the style of
the
          MagicWorkbench
         , keeping a undivided view
on the workbench. The most new distributions of Icons are kept
in this style.

1.3   Install it... NOW !

                  Well, sure, I could write an Installer-Script for easy moving
all neccessary to the right places, but if I would have done
that, the time I needed therefore would have caused less icons.

On the other side there's your configuration I can't know (my
secondname is NOT Copperfield...),so copying via Installer would
be like playing in Las Vegas.   :-)

The things to do are copying:

   - the directories Animdocks and Docks to that
     place, where your Icons for ToolManager or something else
     are located .

   - the contents of env to envarc:sys/
     As the original Startup-Sequence copies the whole Envarc:
     to Ramdisk, it's maybe advisable to create a directory
     in e.g. sys:prefs/ named 'sys', move the contents of the env
     from this distribution to that place and add the line ...

          assign env: sys:prefs/ add

     to 'S:user-startup'.

      – the 's' – contents to your S: Directory, if you want
to use something needing the
          whatis.library
         .
      In 's:Filetypes' already are the needed references for the def_s
      mentioned above.

– the 'Prefs'– Icons as you like to.

      – in the Drives – Drawer are some examples of Disk-Icons and
on the WorkBench placed Drawers. Because of that I like a un-
divided looking WB, there are some left out drawers having an
Icon, which looks like a drive-icon. As I wanted you to have an
overview of those icons, I defined them in this distribution as
Drawer. 'Disk.info's won't be shown, if they're not in the
root-drawer. To use them as ordinary Disk icons, you've to convert
them, one possibility therefor is to load them into IconEdit,
NOT changing anything except of toggling the icon-kind to Device.
After that you've to save it as Disk.info to the root of
that Device you want to use with.
   Another nice tool for many things concerning Icons is
         Swazinfo

1.4 needles to say...

  Things to say to ...

        Bernd Danner, who always said, how useless
        drawing icons is, especially then, if there are so
        much placed on the FredFish-CD

        Martin Huttenloher, thanx for your MWB.
        I think, it's the best solution for making a great
        face for a great computer

        Sylvain Rougier, Pierre Carrette,developing
        the 'whatis.library'. I never want to miss it!

        X-Pert/ProDev, better go back programming
        pocket-calculaters,egg-cookers and CD-Players.

        My Girl-friend, Irene, thanks for being the
        best, which could happen to me.

        Fred Fish, you've done a great job !!!

1.5 what is whatis?

        WhatIs.library

Copyright Sylvain Rougier and Pierre Carette

What is whatis.library ? It is a shared amiga library which alow
programmers to easly recognize type of files (ilbm, 8svx, maxiplan, exe,
PP, etc....) BUT the final user (non-programer user) can define new types
so all programs which use whatis.library can recognize this new type. At
this moment only BrowserII, For and AddIcon use whatis.library but I
planned to rewrite Icon (a program which make WorkBench 2.0 recognize
files which have no icon), and I encourage all programmers to use this
library so users can define new types only one time and every program can
use it. I actuly work on version which support the datatype of KickStart
3.0 so user of whatis.library can use both the customisable whatis type
and the standard datatype type.

For example, you love graphics, you digitize lots of image with an
official commercial program which produce file ".img", and you want
BrowserII can reconised it, well, you define this new type in S:FileTypes
and whatis.library know what it is, so you BrowserII can do automatic
thing on your file ".img", but all program which use whatis.library can
reconised the ".img"-type you just defined and can do what they are
supposed to do with them.

 taken from the original - doc; sorry, but I have to enrol a little bit
 for this very nice tool... :-)

  Needful tools therefor are :

        -BrowserII (FF843)
        -MegaView (FreshFish-Dec93)
        -addicon (supplied with whatis.library,
            spread over FreshFish-May94)

1.6   what for hell is Swazinfo ???

        Swaz Info   Copyright (C)1992,93 David Swasbrook.

     Swaz Info replaces workbench's icon information window while still
     retainig all the information and options and providing more
     window but with several enhancements.

Important Additional Features
****

  * Locale support - uses available language catalogs, the english
     locale built in.

  * Commodities support - can use the commodities exchange to remove,
     or disable SwazInfo.

  * Arexx support.

  * Icons may be dropped into the information window in several places:

     1) If an icon is dropped onto the tool types list then the tool

types from that icon will be added to the list (any duplicates
are discarded).

2) Dropping an icon onto the icon image will load the dropped
icons image to be used for the icon being edited.

3) Anywhere else in the window performs no action.

* Shift-CloseWindow will close all information windows on the same
screen.

* Disk information also displays the disk type (eg. DOS0 or DOS1)

* RWED protection bits may be set for the owner, group and others.

* " MultiuserFileSystem " support:

1) SetUID bit support

2) Owner/Group of the file is displayed and an alternative
owner may be chosen (provided you can modify the file).

* Menu options to cycle through other information windows.

taken from the original - doc; sorry, but I have to enrol a little bit
for this very nice tool...

Swazinfo is available on the FreshFish-Mar93:new/OS30/new/util/swazinfo
German Locale-Data could be get from me.

1.7 Tell me more...

                                    PROGRAM: IconMiser 2.0

AUTHOR: Todd M. Lewis   E-MAIL: Todd_Lewis@unc.edu
         2601 Piedmont Drive
         Sanford, NC 27330-9437 USA

IconMiser is a utility which monitors the creation of icons. When
a program attempts to create an icon that looks like one on your
hit list, IconMiser substitutes the icon or icon image of your
choice.

 taken from the original - doc; sorry, but I have to enrol a little bit
 for this very nice tool...

 IconMiser is available on Fred's AmigaLibDisk 951

1.8 Get this!

```
                    WhatIs.Library

                    SwazInfo

                    Iconmiser
```

1.9 MagicWorkBench

The Style of these Icons has been made by Martin Huttenloher,
who distributes a shareware-paket containing nearly all Icons
  for a standard Workbench. Additional there are some very nice
background-patterns.

Personally I think, that these icons are reflecting the best
quality being published till now, and that this is the best
possibility of making a professional 'face' to your computer.

  Besides, the MagicWorkBench can be got from himself:

   Martin Huttenloher

   Am Hochsträss 4

   D - 899081 Ulm

   Germany/Europe

    The sharewaware-fee is about 20 $

 P.s.:Neither related nor related by marriage... :-)

1.10   I am...

 O.k., ideas, donations, gifts, postcards to:

   CreaTV DeSiGn

   Karsten Böhm

   Ringstr. 55a

   D - 91555 Feuchtwangen

   West-Germany / Europe

   Tel: 49 - 98 52 - 61 8 60

```
   Fax:   49 - 98 52 - 37 38
```

Letterbombs, complaints, raiding parties to:

   my Boss !
