1.2 Introduction

Once I got an Tool Dock program from Aminet (
ToolManager
) and the Dockbrushes
were quite simple, so I improved those Dockbrushes and created some of my
own which were more colorful and smaller. As the
MagicWB
 flood arrived, I
converted most of the Icons into this color scheme which looked quite good
in my eyes at that time. Later with the dispute about
NewIcon
 /
MagicWB
 I saw
that both color scheme were good and decided to use both on my Workbench.

Meanwhile I've thrown some work into the icons and decided to release them.
Most of the brushes I created by myself but some of them are based on other
BrushIcons which were either too big and/or had not enough colour. Beyond it
I wanted to have BrushIcons of both types on different occasions like
presenting them to another User. The "
NewIcon
" Brushes are not in common with
the standard
NewIcon
 Scheme but should have nearly the same size and are
of course colorful. All Icons are drawn with 8 colors and I've used some
tricks to get "more" colors out of it. See
Creating
 for details.

The BrushIcons are best used on a Workbench with less colors and small
solution (though they might look a bit strange on screens where width is
double as large as height. Of course you need a ToolDock program to use them.

1.3 GIFTWARE

                    Giftware

This collection if GIFTWARE. This means if you like it and decide to use it,
you have the moral obligation to send me a gift. The gift might be

* Hardware (A4000s, monitors or whatever ;-)
* a keyfile of your software (if I'm not already registered)
* software of any kind if I don't own it already (if you're unsure contact me)
* CDRoms: Probably I'll get Aminet 8, but Aminet7,6 or Fred Fish are always
  welcome and other of course too. Contact me for assurance.
* books of fantasy or science fiction (english and german)
* chocolate or cookies
* an EMAIL with ideas, DockBrushes or comments which I appreciate

I maintain a User Database where I store information about the user name.
(EMAIL) address (if you want that) and what you gave me.
If you made some contribution to this collection you will mentioned in the
credits section (following in the next release).

Here's my (EMAIL)
                    Address
                       .

Why should I bother and send you a gift ?

I've put many hours of my spare in creating this Dockbrushes and don't have
much money at the moment. I also see it as an experiment to find out how much
interest on a single project is out there in the Amiga community. If you want
to see more DockBrushes you should support me else this project will simply
die. Depending what you give me you might get credits and User
                    support
                       .
I will also inform you on other products I might release if you wish to.
So the survival of this collection depends on you.

1.4 Distribution License and Copyright

                    Copyright

This program is
                    GIFTWARE

and (C) 1995 by Reinhard Katzmann, All Rights reserved.

Distribution License

Permission is granted to distribute this package in unmodified form provided
all the files listed in
                Contents
                remain unaltered and unchanged.
No files may be added, changed or removed from this collection. They may
however be archived to conserve space. It may not be uploaded on any BBS
which claim copyright on uploaded material.

You may NOT charge any fee for this package and it may be only distributed as
long as no profit is made out of it. This collection may NOT be included
in a commercial package, on a magazine coverdisk, or compact disk media.

If you want to distribute this collection on a magazine coverdisk you must
send me a complimentery copy of the magazine issue in which it appears to
my home
                address
                .

If you wish to supply this collection as a part of a CD ROM Collection
you may do it if and only if
* the disc contains at least 20 MB of other freeware programs
* you send me a complimentary copy of the compact disc to
                me
                * the compact disc is related to the amiga computer.

Explizit permission is granted to distribute this collection on any CD-ROM
produced by Fred Fish/Amiga Library Services and on any officially supported
Aminet Compilation CD-ROM.

If you don't agree with this Distribution License, delete this collection NOW!

Read
                GIFTWARE
                for the rights of using this collection.

1.5 Disclaimer

This collection is provided "as is" without warranty of any kind, either
expressed or implied, including, but not limited to, the implied
warranties of merchantability and fitness for a particular purpose.
The entire risk as to the quality and the performance of this collection
is with you. In no event can I be liable to you for damages of any kind
arising out of the use of this collection or any part of it, or the
inability to use it.

Operation successful.
```

1.7 Features

The SmallBrushIcons have the following features:

– 8 color icons

– Width 38 pixels, Height 34 Pixels -> HiRes Lace Brushes

– Animated: Every Brush has two anim frames

– Button Border: Every Brush has a normal button and a recessed button border

–

MWB
: Every Brush has been created/converted for
MagicWB
 colour scheem

–

MWB
 Palettes: Many palettes for Magic WB (see "Palettes" drawer)

–

```
              NewIcon
              : Every Brush been created/converted to be used with
              NewIcon
               colors
```

```
_

              NewIcon
               Palette: I've included the original palette I used for the  ←
                   brushes
```

If you can use a 16 or more color workbench you can use both kind of BrushIcons
If you can use 32 colors you can even have a 16 color background pattern (I.e.
16 other colors than those of
```
              MWB
               and my
              NewIcon
               palette). For both you must
```
have
```
              NewIcon
               installed else you had to convert the Icons into 16 Color icons
```
and merge the palettes (not quite easy, but DPaint IV can handle it).

1.8 Installing

```
              Sorry folks, no Install script included, because I don't know  ←
                   where to copy
```
BrushIcons as default. But I will explain here how to do it:

Copy the palettes of your choice to your favourite palettes drawer (If you have
no palettes drawer I recommand creating one, example: WORK:Grafik/Palettes.

Copy the BrushIcons of your choice to your favourite brush drawer and (if not
yet existing) make a drawer there called 38x34 and copy the BrushIcons there.

You don't need to separate
```
              MWB
               and
              NewIcon
               Brushes, because they have different
```
terminations (".anmb" for
```
              NewIcon
               and ".anmb.
              MWB
              " for
              MagicWB
               color scheem).
```

Copy this Guide to your documentation directory (for example: HELP:English)

That's all. Now you can
```
              use
              it in your ToolDock program.
```

If you have ideas for standard directories or even want to write an install

script for the SmallBrushIcons, feel free to
                    contact
                    me.

1.9   Requirements

                Now this is what you will need to use this package:

- An Amiga of course (no PC Clone will work here ;-)

- OS2.04 or greater (because of the color scheme and the tooldoc programs)

- A ToolDoc program supporting two-frame Animations (
                ToolManager
                 does this)

- A Paint program with BrushAnim support for expanding this package
  (DPaint IV offers this, but is commercial, PPaint4 did not work for me)

1.10   Usage

                The only thing you need to use these BrushIcons is an ToolDok ←
                    program which
is able to use Animations with two Anim frames. If your ToolDok program
supports only two brushes then you have the permission to create two separate
brushes out of the Anim or you can try to convince me to include also normal
brushes in this collection, but that will cost you something ;-) (Noo don't
strike me).
                ToolManager
                 supports this kind of Images, I don't know about
other ToolDock programs, though. Please let
                me
                 know about these, if you
wish support for your program.

Dependant on the User input I will decide what (and if) I will put in an new
release. If there's no input, there will be no further release.

If you use
                ToolManager
                 you can simply add it as a Picture to your favourite
program and include it into a Dock Window. I might add information for
other programs here if you wish to and write a small text for me.

1.11   Creating

If you want to create your own icons (and send them to me - hint ↩
hint :-) you
need to have a paint program which supports at least two frame brush anims.
I only know of DPaint IV being able to do that, if you know any other
(PD/Free/Shareware prefered) please let me know about it. I know there
exists some Anim creatore, but didn't look into theese and so I don't know
if they support small sizes and creating brushes from anims. If you have
such an program, you can use a program like FreePaint to create your brushes.

I've included the palettes for both types of BrushIcons and you should load
any of them into you painting program before starting. You also can use the
brush "Colors.var" in the 38x34 drawer to get an idea how to get "more"
colors out of the 8 color palette. With this brush you get 25 "more" colors!

I've created some templates for both the
                MWB
                 and
                NewIcon
                 DockBrushes. You
can use them to have a decent background for your dockicon. I strongly
recommand to create a background for your DockBrush, except your Icon totally
fills the Area. At least you should use the borders (normal and recessed)
when creating your Brushes. You must of course not use the background I
included here but you can create some of your own.

Now you can start painting your Brushes. It would be nice if the first and
second brush are animated in some way, but even I did include Brushes which
have the same first and recessed brush. In the future I might also add more
hints in the painting part of the Brushes - depends on your input :-).

If you want to see your icons included is this package (you will get credits
and I'll be able to send the package to you via E-Mail if possible) feel
free to contact
                 contact
                 me. You can also send me an brush icon
of one type (
                NewIcon
                /
                MWB
) and I will then try to convert it into other
type (this work is always done by hand, I've no prgram that does it).

1.12 Support

                If you have any questions regarding this collection, you can
                 contact
                 me.
Best (and fastest) way to do this is via E-Mail. I can help you with
drawing problems (including finding suitable program like an anim splitter).
I can try convert Brushes from one type to another (
                MWB
                /
                NewIcon

```
                        ).
But I will do this only if you give me a
                    gift
                    of any kind and so will
be included in the User Database or if you are already in the Database.
```

This support also includes installing problems, or usage problems in
conjunction with
```
                    NewIcon
                    <->
                    MWB
                    color palette(s) or simple problems
with the ToolDock program you are using.
```

1.13 Bugs & Ideas

```
                If you find bugs in the BrushAnims and/or palettes, please let me  ←
                    know about
it. Also I'd like to know about bugs/typos you found in the documentation.
```

If you have ideas of any kind improving this collection, you will be granted
with an addition to the User Database if I include your idea into the next
release. Some hints for ideas can be found throughout the document.

I will try to answer every kind of input I get from you (including snail
mails), though I only will send away postcards at the moment except you pay
the postage. The easiest way to
```
                    contact
                    is still E-Mail.
```

I will also add you to the User Database if you send me suitable Dockbrushes
and give you the credits for them. If there's someone who'd like to translate
the documentation into another language than the included, you can also do it
and will be included in the User Database (later this should include the
install script)

Not all of the DockBrushes have a changed second brush. If you have an idea
or if you have created an own, feel free to send it to me.

1.14 Future

Ideas from me which might be in an future release (no order):

- Include Install Script in Germany and English

- Add documentations of other languages if I get any

- Include much more Icons

- Better directory structure: Utilities, Tools, Prefs, Music etc.

- Improvement of the documentation

1.15 Contacting

E-MAIL (prefered):
----

   suamor@student.uni-tuebingen.de
   katzmann@gemmi.informatik.uni-tuebingen.de

SnailMail:

   Reinhard Katzmann
   Schellingstraße 41

   D - 72072 Tübingen

BBS'es

You can try to reach me through BBS'es near Tübingen. Some of the Sysops
might know me or have contact to the Internet. I'm only User of one BBS:

Onkel Helmut's Hütte

Line 1: (0049) +7157/64546 (28800 Baud)
Line 2: (0049) +7157/65428 (14400 Baud)

My usual Nickname on the internet or at this BBS is Suamor.

1.16 History

V1.0

- Initial release

1.17 MagicWB

MagicWB is Copyright © 1993 by Martin Huttenloher

From the original documentation (V1.2p):

<cite on>

   I simply didn't like the gray and abstract Icons provided by Commodore.
   Although they could use the color blue for their Icons they rarely used

it. In fact, only white and black were used for these Icons. Rather
boring, don't you think? Second, I wanted to see nice background patterns
on my Workbench. Unfortunately there is no pattern pool existing in the
AMIGA community, so I had to create them myself. Furthermore I didn't like
the font topaz/8 for my shell environment or for any other programs using
topaz/8; it was too fat. And I wanted to have a really tiny font for my
Icons. Helvetica/9 was just the right font and the right size. BUT it was
so small that you could hardly read the text, because it was not designed
well. So I decided to make replacements for topaz and helvetica. As many
users also like the Courier font I decided to refine them, too.

To sum it up, I wanted to polish up the outer appearance of the AMIGA
Workbench to probably outdo any other "Workbenches" on other computer
platforms. I hope that I achieved this goal...

<cite off>

This package is shareware. I've used the original palette and on this base
I created the other palettes (not quite easy to do). I still want to create
more of them, depending on the User input of my DockBrushes collection.

I did not use any of the Icons of the original MagicWB package to avoid
copyright conflicts. All the MagicWB Icons are drawn/converted by myself.

1.18 NewIcon

NewIcon is written by Nicola Salmoria and Philip A. Vedovatti

From the original documentation (V37.9):

<cite on>

  This archive is not "just another set of icons". This is a completely new
  concept, which I hope will revolutionize, and push in the right direction, the
  idea of GUI on the Amiga.

  Kickstart 3.0 was Commodore's first step towards ReTargetable Graphics. There
  isn't a device independent graphic engine yet, but there is a new pen
  arbitration system which allows applications to obtain a given color, or the
  one which is closest to it if there are not enough free pens.

  It's simply ridiculous that, on a system capable of displaying a 256 color
  Workbench screen, and with a pen arbitration system like the one described
  above, icons are limited to 8 colors. Various solutions have been proposed,
  ranging from "use some colors and hope they are right" to "allocate some pens
  and reserve them for icon display", but they all miss the point, which is:

    Why should I, the user, have to care about the icon palette?

    Why should I set the system palette in a way decided by someone else
    (the icon designer) and not the way _I_ like it?

When you display a picture on the Workbench screen using MultiView, you don't
have to care about the palette: the system chooses it for you. So why should
one care about the palette used by icons? The system should take care of it,
not the user.

Unfortunately, icons don't carry palette information. Therefore, I had to
define a new standard for icon files, and write a system patch to make the
system recognize them. Several goals had to be reached:

· The new standard should be backward compatible, that is users not
  running the patch program should see the standard 4-color icons.

· Manipulation of icons by users not running the patch program should not
  cause the new icon information to be lost.

· Remapping of the icons to the Workbench palette should be as fast as
  possible.

· Data should be compressed in order to reduce disk usage.

· The patch should work even on Kickstart 2.0 systems, with limited
  features.

All of the above goal have been reached. The new icon information is stored in
the ToolTypes, so it is completely backwards compatible. A library,
NewIcon.library, takes care of reading and writing the imagery in the
ToolTypes; it also hides away the special ToolTypes so that when one asks for
Information about an icon only the standard ToolTypes are shown. A patch
program, NewIcons, intercepts calls to icon.library, redirecting them to
NewIcon.library, so that Workbench and all other applications transparently
get the new icon imagery.

<cite off>

I recommand to read the Foreword of the documentation for fully understanding
the goal of NewIcons. My "NewIcon Brushes don't fit right into this concept
but then again those are no Icons and they have a palette. I simply called
them NewIcon because they can be used perfectly together with them.

1.19 ToolManager

ToolManager is a program which is Copyright (C) 1990-93 Stefan Becker

Current Version: V2.1

What is ToolManager?
****

   ToolManager is a flexible program to manage the tools in your working
environment. It can start Workbench and CLI programs, ARexx scripts and
generate HotKey events. It even can issue commands to a ToolManager
running on a remote machine. The user interface consists of menus,
icons or dock windows. If you like a noisy computer, you can associate

a sound to each of these items. See Sound.

   ToolManager can add items to the Workbench 'Tools' menu. If you
select such a menu item, the program associated with it will be
started. Every selected icon on the Workbench will be used as an
argument for the program. This feature is only available when the
Workbench is running. See Menu.

   ToolManager can add icons to the Workbench window. When you
double-click such an icon, the program associated with it will be
started. If you drop some icons on this icon, the program will be
started with these icons as arguments. This feature is only available
when the Workbench is running. See Icon.

   ToolManager can create a dock window from a collection of programs.
This window can be opened on every public screen. Each program is
represented by an image or a button gadget. To start a program you
simply click on the image or the button gadget. If the dock window has
been opened on the Workbench screen and the Workbench is running, you
can also drop some icons on the image or the button gadget to start the
program with arguments. See Dock.

   Additionally you can assign a Hot Key to each program. If you press
this Hot Key, the program will be started. Note that *no* arguments can
be passed to the program if you use this startup method. See Exec.
