1.2 Introduction

ARW's Magic Icons V2.1

Here is my second(.one) MagicWB icon collection. These icons are
mostly original, but some are modified (and improved I think :-) from
other MagicWB icons and other 'standard' icons (isn't MagicWB
standard by now? :-). I have also included some of the better icons
from AWMWB1, such as the non-lace disk icons, probably the most
useful in the collection.

All icons are standard size so you don't have to have an uneven
display if you don't want to.

All the drawer icons have empty drawers behind them, so you can
use IconUpdate or similar program to update your old drawers.

Please keep this archive intact, or make sure you use the
-e option in LHA to repack them, otherwise the empty drawers
will be lost.

There are also some icons designed for non-interlaced displays.
The only MWB icons that don't look right on non-interlaced displays
are the disk ones I feel, so I've designed these so they look a
bit better and take up less space. I've seen SmallMWB or what
ever it is, and quite frankly the icons in it suck.

I also don't include any pics of my WB in archives either -
it only horrendously increases the size of the archive, and I don't
honestly think it interests people that much.

Note - These icons are designed for MagicWB2 or above,
running MagicWBDaemon or a similar utility. Otherwise
they may look a bit wierd on your WB depending on how many
colours you are using.

1.3 Icons in this distribution

Icons in this distribution

Apps

Commodities

Coms

Directory Opus

Disks

Games

System

Tools
  Utilities

WBStartup
    The Click for Palette icon is by Rom

The guide icon is modified from Rom's original guide icon,
  standard MWB background and shadow.

1.4 Applications

OctaMED -   Icon using part of the keyboard from the original.

Imagine -   I've never seen an icon for this, strange

                          considering the popularity. A cube as seen
                          in the detail editor becoming 'rendered'.

    DTP -   A standard DTP icon. Modified from Martin
                      Huttenloher's original dock.

    Sound Editor -   Once again modified from Martin's Dock.

    Video Drawer -   For general video applications. A tape.

    AMOS Drawer -   Drawer with AMOS on it.
    AMOS -   Icon with reduced size AMOS from the original
                     AMOS icon. This is another icon I'm surprised
                     I haven't seen before.
    AMOS Pro -   Again, reduced size AMOS icon with the 'Pro'
                     backdrop.

    Cinemorph -   Modified from Rom's SuperView drawer, with
    drawer   a reduced version of my morphed Mona Lisa as
                     the alternative image.
    Cinemorph -   Modified from Rom's SuperView icon. The
                     alternative image was actually generated by
                     Cinemorph, and though it is truly disgusting
                     it also allows us to see that the Mona
                     Lisa was infact modelled on Adolph Hitler! :-)

    Photogenics -   A camera, you could use it with Rom's Quickgrab icon.
    Drawer

    C64Emulator -   An icon for Commodore 64 emulators. The
                     BASIC bytes free is wrong though, I can't
                     remember what is was :-(32768? Anyway,
                     I just left it at 32000. Maybe in the next
                     collection.

    ComicSetter -   Shows POW and BOOM when pressed, in comic
                     tradition.

    XCAD -   Just an alternative to the standard MagicWB
                     CAD icons that uses the name of the program
                     instead of an actual image.

1.5 Commodities

    Exchange -   Modified from Martin's Exchange icon and
                     Commodity background. Once again, I've
                     always wondered why Martin didn't give
                     the commodities their own icons.

    Autopoint -   Shows the active status of two drawers
                     changing.

    ClicktoFront -   Shows a window moving in front of another.

    Blanker -   Modified from a couple of other blanker icons

                                  I had lying around. By Rom and Tau I think.

CrossDOS –   Shows a disk with DF0:???? underneath changing
                   to MS-DOS.

FKey –   Basically just an icon by Tau (I think).

MouseBlanker –   Shows a pointer disappearing when an 'A' is
                   typed into a shell window.

NoCaps –   Once again from an icon by Tau (I think).
                   Modified to show the Caps Lock light on, then
                   off even when the button has been pressed.

1.6   Coms

Download –   A simple download icon, arrow towards computer.

Upload –   A simple upload icon, arrow away from computer.

MLink –   Drawer icon for that wonderful program that
                   tricks my uni text account into thinking it
                   is a SLIP account. Only problem is,
                   the uni ZModem protocol is stuffed, so it
                   doesn't work at the moment :-(

AMosaic# –   Drawer icons for AMosaic, variations on a theme.
Drawer
AMosaic –   Adapted from the original icon.

1.7   Directory Opus

DirOpus –   Modified from Martin's original File
                   Manager dock.

Config –   A prefs icon with the DirOpus icon on it.

1.8   Disks

Disk –   A smaller disk icon for use on non-laced
                   displays.

Kick –   As above, but a kick icon. Use an icon
                   editor that can handle kick icons, or
                   Icon Update to copy to def_kick.

HD –   A HD icon for non-laced displays, correct
                   aspect ratio.

RAM –   A smaller RAM icon for non-laced displays.

Network -   Same size as hard disk icon.

Cartridge -   Correct size cartridge icon.

The below icons are for use with NewIcons' DefIcons utility. DefIcons
lets you define def_icons for all file systems, so you get a real
icon for your PC, Mac or CD disks. Also useful is MultiFileSystem.
This utility 'combines' all your file systems into one, meaning
that only one disk icon ever comes up. e.g. you don't get DF0:????
or PC0:???? icons when an disk with the other filesystem is
inserted. Remember not to install the whole NewIcons package,
it contains inferior icons :-)

Plenty of MagicWB def icons for all sorts of files are available
primarily in JTEMWB4.lha in pic/icon on Aminet, with a couple
also in JTEMWB3.lha and from RomIcons4.lha onwards.

Both NewIcons and MultiFileSystem are by Nicola Salmoria, and are
both available on Aminet (util/wb/NewIcons.lha) and I forget the
exact name of MFS, but it is something like util/wb/MFS20.lha,
but don't quote me on that, it might not even be in that file
area (wow, that paragraph rambled a bit, didn't it? :-)

All the icons below are originally by Rom, I've just
corrected the aspect ratio for non-lace displays. If you would
like the original icons, they are in RomIcons8.lha, in pic/icon
on Aminet.

def_CDDAdisk - for CDs.

def_MSD0disk - for CrossDOS PC disks (Windoze logo on black disk).

def_MAC0disk - for Macs (Apple logo on grey disk).

def_MAC1disk - for Macs (Apple logo on light blue disk).

1.9 Games

F1GP -   Modified Microprose icon.
F1GP2 -   Based on FIA's integrated F1 logo.
F1GP3 -   Standard sized icon.
F1GPEd -   A preferences icon for F1GPEd (sort of a
                 prefs program)
Racing -   A drawer icon for F1GP.

ArcadeAdven - Drawer icon (a gun).
AnotherWorld - Icon showing 'Another World' text/logo.
               Since Delphine (for some reason known only
               to them) decided to tell everyone to load
               AW (and FB) on HD from the CLI, I have
               attached IconX scripts to these icons, to
               load the games. This means you will have to
               copy icon and file using drag and drop,
               rather than using IconUpdate or similar prog.

```
Flash-back -   Icon showing 'Flashback' text + script.
               Do not rename this icon to 'Flashback'.  Since
               the program file is 'Flashback', I decided to
               just add the hyphen to get a different name
               for the script.

GraphicAdven - Shows a LucasFilm/Arts type button asking
               you to open it when closed and vice versa.

Golf -         Club, tee and ball.

FlightSim -    Reduced size F15 from Mark Sorenson's F15
Drawer         icon which I suspect was modified from
               Microprose's original icon.
FlightSim -    Ditto.

Cards -        A drawer for card games.
Airbrush -     Icon for KlondikeIII cardset.  Reduced size
               and recoloured from Reko's icon.
C64 -          Redrawn to be a standardized icon.
Default -      Modified from Rom's Klondike icon.
Puzzled -      Shows the Puzzled symbols.
Standard -     Modified from Rom's Klondike icon.

WBGames -      Shows a small game of Tetris, in a WB window.
Drawer         For the FMS collection of WBGames.
15 -           Depicts a game of 15.
Boulder -      Depicts a game of Boulder.
Boxman -       Depicts a game of Boxman.
Columns -      Depicts a game of Columns.
Mine -         Depicts a game of Mines.
Tetris -       Depicts a game of guess...
```

1.10 System

```
All modified from Martin's original icons, now standard size.

Format

FixFonts

Intellifont

NoFastMem

Shell
```

1.11 Tools

```
HDBackup -     Constructed from Rom's standard size and
               JTE's moving drive head/cover icons.
HDToolBox -    As above.
```

```
QBTools -      Recoloured and resized detail from the original.

IconUpdate -   Modified from Martin's original icon.  Now
               standard sized.

DMSWin -       Large disk becoming small disk in window.

Install -      Another one of those ones that there should
               be but ain't.  A decent install icon.

Lens -         Modified from the original Lens icon, now standard
               sized.

Mostra -       Rom's standard picture displayer icon
               fading in (as a picture does in Mostra).

SuperView -    I thought Rom's SuperView icon was excellent,
               except he forgot that SuperView is a
               commodity, and as such deserves a commodity
               background.

DKB Drawer -   A drawer to put DKB Magicmem in (see below).
               DKB's logo on the drawer.

def_     -     A nice sized non-lace icon to use as a back-
background     ground for PictIcon's icons.  Copy the icon
               to env:sys/, and modify these tooltypes in
               PictIcon's icon:
               BACKGROUND_ICON=env:sys/def_background
               CENTER=YES
               PIC_X_POS=4
               PIC_Y_POS=1
               PIC_X_SIZE=93
               PIC_Y_SIZE=45
               ASPECT_X=2.5
               ASPECT_Y=1
               The latest version of PictIcon is available as
               PictIcon1_01.lha on Aminet, the file
               Picicon_1.03.lha (or something similar) is an
               inferior utility.
```

1.12 WBStartup

```
     PC0 -         For a PC0: icon I now use my CrossDOS icon.
    (If you mount PC0: in WBStartup you don't
    get a PC0:???? icon under DF0:.  See
    the
Commodities drawer
 for this icon (I
    didn't want to put it in two different
    places).  For if you don't want to install NewIcons.

DiskSpare -    Same as above, but for the DiskSpareDevice.
```

```
  DKB Magicmem - ShowConfig icon with DKB logo on.

  M(ulti)tool1 - Similar to Rom's icon, but with the tools
                 popping out of the knife when the icon is
                 pressed.
  M(ulti)tool2 - Same as above, but with commodity background.

  Starblank    - If you like seeing stars as your blanker.

  Trashmaster1 - MagicWB trashcan on commodity background.
                 Redrawn by hand rather than scaling.  For
                 Trashmaster or similar AppIcon Trashcan
                 startup program.
  Trashmaster2 - Alternative MagicWB trashcan, redrawn
                 by hand once again.

  VirusChecker - With a little surprise for the nasty virus :-)
```

1.13 Copyright and Legal Stuff

```
  MagicWB is Copyright by Martin Huttenloher.

  The icons stored in this archive are © 1995 by Alisdair Walker.

  You may only modify the icons for personal or public use so long as
  you acknowledge my name in your credits AND/OR you send me a copy!
  (I want to see what you've done with them :-)

  You may not use the icons, or the imagery of them, unchanged or not,
  on any other platfrom besides Amiga.

  These icons may be freely distributed via BBSs, InterNet/UseNet,
  software libraries such as Fred Fish's and Aminet CD-ROM, and
  magazines as long as the archive is not modified in any way!!!

  I will NOT be held responsible for any damage caused by using the
  icons contained within this archive.  You, the user, take full
  responsibility for using these icons, following my installation
  instructions etc.
```

1.14 Important

```
                Please send me something if you think these icons are worth  ←
                   anything.
  Your own icons or program, a postcard of your town, anything.  If
  you want to put these on your magazine coverdisk, how about a copy
  of the mag?

          Addresses
```

1.15   History

```
Version 1.0 (AWMWB1.LHA) - 22-Jan-95

Original release - I'd seen other peoples collections, thought the
icons I'd drawn weren't too bad, and released them.

Version 2.0 (AWMWB2.LHA) - 12-Apr-95

I'd drawn a whole heap of new icons so I decided to release these too.
Decided some of the original icons weren't that good (check them
out though :-), and kept the decent ones in this collection.

Version 2.1 (AWMWB21.LHA) - 20-Apr-95

Drawn a few more icons, the Mosaic, MLink and the new disk
icons.
Decided to add a few more greets etc.
Amigaguided the documentation.
Added a palette.
```

1.16   Hello and thanks to...

```
            Olov Stener, who sent me the only mail I received in connection
to my first collection!

          Roman Patzner
            (Rom), the person whose icons I modify more than
anyone elses.

Andrew Leniart, Sysop of Andy's Attic, who uploaded the first
collection to the Internet (and probably this one).

University of Melbourne, for giving me a (limited) Internet
connection.  C'mon guys, think taking away FTP access is going
to stop anyone?  Thanks for leaving (FTP-)mail and WWW though,
so I can still call Aminet's Web mirror :-)

Urban Müller and the Aminet team.

All the other cool icon artists.  Keep drawing.

  Good luck to C=UK...  The auction's a couple of days from now as
  I right this (20th April 1995).
```
