Chapter 1

Recent2Term

1.1 Table of Contents

Recent2Term-Guide

© Stathis Plakidas

A program that helps you generate a personal-list (file) from a RECENT.

Now you will download MORE files from Aminet, writing no line.

Customize it and you will like it. The tool for every Aminet-user.

1.3 disclaimer

The **author** is in no way responsible for any damage or loss that may occur due to direct or indirect usage of this software.

Use this software entirely at your own risk!!

This program is SHAREWARE

If you use it send me US 4\$ or 6 DM or 1000 Drx

Registered user get my new versions by mail (give your mail address)

and the shareware requester will be removed.

1.4 inst

Put the Re2Te.Config in your sys:s and edit the lines 1,2 and 3

In line number 1 you have to define your **cdpath**

In line number 2 you have to define your **headers**

In line number 3 you have to define a path for your custom editor (ed,Ced)

I propose to create a directory and put there all your cdpaths and headers.

The last four lines define your screen palette if the program uses a **Custom Screen**

There is an example with a Re2Te.config file and a directory called Inet which contains the cd-path and the header.

Put the font in your sys:fonts directory

Ready.

1.5 prog

This program loads and recent and generates a file called ".r2t"

The file .r2t contains all the information you need, when you are working with Inet and recent.

The first way to work with the .r2t-file

If you use TERM, © Olaf Barthel, then you have to load the .r2t file in your packet window. Now you can select any line and press return.

If you want you can select every line and press return.

The second way is, to upload the .r2t file as Ascii-file.

Now every line will be executed. You type no word!!

You can save you selected lines choosing "Save selected" when you want to know what files you downloaded.

Edit Cd-Path File

Edit Headrs File

1.7 m1

Loads a recent file

1.8 m2

Generates a .r2t file if you have selected more than one line

1.9 m3

You must try it out.

1.10 m4

Edit your custom pallete if you work on a custom screen.

1.11 m5

Don't do it.

1.12 m21

Let you select a new cd-file

1.13 m22

Let you select a new header-file

1.14 m23

Informs you about the current cd-file and header-file.

1.15 m31

This menu lets you save your selected lines in a file.

So you can archive all the progs you download.

1.16 m32

Puts or removes a blank line for every day change in the recent file.

1.17 m33

Edit your cd-file with your custom editor.

So you can make changes quick, or generate new cd-files.

1.18 m34

Edit your header-file with your custom editor.

So you can make changes quick, or generate new header-files.

1.19 cdpath

Create a new file and write in your cd path for example:

```
cd pub/aminet/ don't forget the last "/"
```

1.20 head

Create a new file and write in your cd heades for example:

```
Mylogin
```

```
Mypswd
```

```
do-work-line-1
```

```
do-work-line-2
```

```
do-work-line-x
```

```
ftp 123.456.789
```

```
(*)
```

```
close
```

```
bye
```

```
sz *
```

```
rm *
```

```
logout
```

```
(*)
```

Explanation

```

-----
Mylogin <----- login
Mypswd <----- password
do-work-line-1 <----- /go dial out
do-work-line-2 <----- d
do-work-line-x <----- 2
ftp 123.456.789 <----- ftp site
mylogin <----- login
myftppswd <----- ftp-password
(*) <----- Header1 end
close <----- Close ftp
bye <----- exit
sz * <----- download all
rm * <----- delete all
logout <----- go home
(*) <----- Header2 end
Don't forget the two (*). only so i know where you headers end.

```

1.21 custom

Change the icon tooltypes.

SCREEN=CUSTOM if you want to work on a custom screen

SCREEN=NOCUSTOM if you want to work on the WB-Screen
