# **Turnpike v3 and Windows 95**

#### What you need to install and how to dial up

If you have Windows 95 installed on your PC, you will be able to access the Internet using either the NTS Winsock supplied with Turnpike v3 or the one provided as part of the Windows 95 Dial-Up Networking (DUN) software.

Either of these Winsocks can be used not just with Turnpike but also with other Internet applications that you wish to run alongside Turnpike - whether 16bit or 32bit.

In general, it will be easiest and most convenient to use the NTS Winsock provided with Turnpike, because this allows you to run the Turnpike Connect program and go on-line in one smooth action. Setting up the Windows 95 DUN and using it to dial up your Access provider is not a simple task.

But in case you particularly want to use the DUN's auto-dial feature or you need it to support some exotic hardware you are using, the following pages describe the special features of running Turnpike alongside the DUN. It also explains how to install and configure the DUN software because this isn't always clear to Windows 95 users.

## Contents

If you are happy to use the NTS Winsock supplied with Turnpike, you can ignore this document.

READW95.doc 1 01/03/2023

Step 1. Installing and Configuring your modem

Step 2. Installing the Dial-Up Networking (DUN) software

Step 3. Installing the TCP/IP software

Step 4. Installing the Dial-Up Adapter

Step 5. Setting up the Connection icon

Step 6. Dialling up

#### Step 7. Using a Dial-up script

Turnpike itself is a good source for much of the configuration information you will need to give. So we suggest that you start by installing Turnpike as described for example in the Turnpike Set-Up book, then return here and follow the steps to ensure that your modem and the Dial-Up Networking software are correctly installed.

Note: If you need to use the Windows 95 Winsock but you have already installed Turnpike's own Winsock, don't worry - just use the Configure: Winsock Used option in the Turnpike Connect program to select the DUN Winsock instead.

You should also note that Windows 95 Set-Up disks are needed for some of the steps, and that the pictures show the settings required for connecting to Demon using a Sportster 28800 modem connected on COM1 from a stand-alone machine. Other settings may be required if you use either a different Access provider or a different modem - or if your PC is on a network.

READW95.doc 2 01/03/2023

# Step 1. Installing and Configuring your modem

Call up the Control Panel (from the **Settings** option of the Start menu) and double-click on the **Modems** icon.

With no modem yet installed on your PC, you should see:

(If a modem is installed, you will see instead a list of modems. If your modem is listed, go on to set its properties as described below. If not, click the **Add** button to display this '**Install New Modem**' dialog.)

Opt for Windows to detect the modem (by ensuring that the tick box by the 'Don't detect' option is cleared), then click **Next**.

Windows then tries to identify your modem.

READW95.doc 3 01/03/2023

If your modem is correctly identified, simply click the Next button.

If it isn't correctly identified, click the **Change** button and select the modem's manufacturer and model from the following display.

Install New Modem		
Click the manufacturer and model of your modem. If your modem is not listed, or if you have an installation disk, click Have Disk.		
Manufacturers: Turbomodem U.S. Robotics, Inc. Ven-Tel Victory Winbook Xirpore ▲ ▲ ▲ Models Sportster 2400 Sportster 28800 Sportster 3800 Sportster 38	V.42bis PC ) (Sweden) ) External ) Internal ) PCMCIA Fav	
< <u>B</u> ack	Next > Cancel	

(If your modem isn't listed, either take the 'Have disk' option if a disk was supplied with the modem or select the 'Standard' modem of the appropriate baud rate - from the top of the Manufacturers list.)

When you are ready to continue, click the **Next** button and, if necessary, set the port to which the modem is attached.

If you are installing a modem for the first time, you will then be asked for details of your location and your phone system.

In the final dialog, you are offered a Finish button. When you click this, you will be put into the Modem Properties dialog from where you can set the properties of your modem.

READW95.doc 4 01/03/2023

# **Setting Modem Properties**

Check your modem is selected in the Modem Properties dialog, then click the **Properties** button and set its properties as follows.

### **General properties (Displayed first)**

Sportster 28800 External Properties
General Connection
Sportster 28800 External
Port: Communications Port (COM1)
Speaker volume
Off High
Maximum speed
115200
Inly connect at this speed
OK Cancel

The speaker volume is up to you but the speed to set depends on the modem and the type of UART in the COM port - and also on how fast your PC is able to respond. Ideally, the speed set here should be 4 times the modem speed eg. 57600 for a 14.4k modem or 115200 for a 28.8k modem. But data can only be transmitted at these speeds if the COM port uses a 16550 UART (and then only if the PC itself can cope at these speeds). If it uses a 16450 UART, the highest speed to set is 38400, while if it uses an 8250 UART, the limit becomes 19200.

READW95.doc 5 01/03/2023

**Note**: If you don't know what type of UART is used, you can find out by returning to the Modem Properties dialog, switching to the Diagnostics display, selecting the appropriate port and clicking the **More info** button.

**Connection properties (Displayed by clicking on the Connection tab)** 

Sportster 28800 External Properties
General Connection
Connection preferences
Data bits:
Parity: None
Stop bits: 1
Call preferences
✓ Wait for dial tone before dialing
Cancel the call if not connected within 60 secs
Disconnect a call if idle for more than 30 mins
Port Settings Advanced
OK Cancel

*Connection preferences*: The default settings of '8, None, 1' are the ones you are likely to need here.

*Call preferences*: This 'Wait for dial tone' option should be selected unless your modem isn't able to detect the appropriate dial tone.

Now click the Advanced button to show the 'Advanced Connection Settings' dialog.

READW95.doc 6 01/03/2023

Advanced Connection Settings	? ×

Extra settings	
E Rec <u>o</u> rd a log file	OK Cancel

*Error control*: is automatically selected where it is supported by your modem.

*Flow control*: Select Hardware flow control.

Modulation type: The 'Standard' setting should be fine.

Extra settings: Slot for additional modem initialisation commands. These may be needed if Windows 95 didn't recognise your modem.

When you have finished setting your modem's properties, click OK/Close until you are back to the Control Panel.

# Step 2. Installing the Dial-Up Networking (DUN) software

This is done from the Control Panel which is called up from the Settings option of the Start menu.

Double-click on the Add/Remove programs icon in the Control Panel.

Click the Windows Setup tab, select the Communications option and click the Details **button.** 

Add/Remove Programs Properties	? ×	
Install/Uninstall Windows Setup Startup Disk		
To add or remove a component, click the check box. A shaded box means that only part of the component will be installed. To see what's included in a component, click Details.

READW95.doc 8 01/03/2023

Tick Dial-Up Networking, and click OK - then click OK again to leave the Add/Remove programs dialog.

(If Dial-Up Networking is already ticked, just click OK back to the Control Panel, then go on to the section on 'Install the TCP/IP software'.)

Follow the instructions that appear on the screen to install the DUN software.

When the following dialog is displayed:

Network ?X
Configuration Identification
Windows uses the following information to identify your computer on the network. Please type a name for this computer, the workgroup it will appear in, and a short description of the computer.
Computer name: Happyday
Workgroup: Happyday
Computer Description:
OK Cancel

Note that these settings are primarily for computers on local networks. If your computer is not networked to others, just invent a name for your computer and "workgroup".

You can fill in a Computer description if you wish.

Then restart your computer when you are prompted to do this.

# Step 3. Installing the TCP/IP software

(This is also done from the Control Panel - called up from the Settings option of the Start menu.)

Double-click on the **Network** icon in the Control Panel to display a list of the installed Network components.

(If TCP/IP is listed, simply select it - then set its properties as described below.)

Network

### DNS configuration page of dialog

<u>Demon customers</u>. If your full Domain name is **someplace.demon.co.uk** enter **someplace** as the Host and **demon.co.uk** as the Domain. (If you are about to sign up for a Trial account with Demon Internet, you need to fill in olr as the Host.) The DNS numbers for Demon are **158.152.1.58** and **158.152.1.43**.

Other customers. Generally you should enter your username as the Host and your service provider as the Domain. (e.g. **freddie@whizz.net** would enter **freddie** as the Host and **whizz.net** as the Domain. The numbers to use for the DNS addresses can be obtained from your ISP, or you can run the Turnpike Connect program and look at the **Service access** option in the Configure menu.)

READW95.doc 18 01/03/2023

When you have finished making these settings, click **OK** back to the Network dialog.

# Step 4. Installing the Dial-Up Adapter

If the list of Network components is not already displayed, double-click **Network** in the Control Panel to call it up.

If Dial-Up Adapter is already listed, ensure that **Windows Logon** is selected as the **Primary Network Logon**, then set the properties of the Dial-Up Adapter as described below.

Network ? 🗙
Configuration Identification Access Control
The following network components are installed:
Client for Microsoft Networks
Client for Netwale Networks      Dial-Up Adapter
FIX/SPX-compatible Protocol
VetBEUI
Add <u>R</u> emove <u>Properties</u>
Primary Network Logon:
Windows Logon
<u>File and Print Sharing</u>
The primary network logon is the client that is used to validate
your user name and password, process any login scripts, and
perform other startup tasks.

If **Dial-Up Adapter** isn't listed, click the **Add** button and select **Adapter** from the following list.

READW95.doc 19 01/03/2023

<u>A</u> dd
Cancel

Click Add again and select Microsoft Dial-Up Adapter from the following list.

Select Network adapters
Click the Network adapter that matches your hardware, and then click OK. If you have an installation disk for this device, click Have Disk.
Manufacturers: Network Adapters:
<u>H</u> ave Disk
OK Cancel

When you return to the main list, ensure 'Windows Logon' is selected as the Primary Network Logon - then set the properties of the Dial-Up Adapter as described below.

## **Dial-Up Adapter properties**

To set these, select **Dial-Up Adapter** in the list of Network components (see above) and click the **Properties** button.

## **Driver Type**

Dial-Up Adapter Properties	? ×
Driver Type Bindings Advanced	
Click the type of the network driver to use:	
Enhanced mode (32 bit and 16 bit) NDIS driver	
O Real mode (16 bit) NDIS driver	
O Real mode (16 bit) ODI driver

	OK Ca	ancel

Leave these settings alone too.

When all set, click **OK/Close** until you get back to the Control Panel.

## Step 5. Setting up the Connection icon

Select 'My computer' and open the Dial-Up Networking folder.

Assuming this is the first time you have gone into this folder, you will see a Welcome screen followed by a 'Make New Connection' dialog.

READW95.doc 23 01/03/2023

Make New Connection	
	Image:
	< Back Next > Cancel

(If you have another connection set up, open the Dial-Up Networking folder and click on the *Make New Connection* icon.)

Enter a name for the connection (such as Demon Internet), and select the modem you intend to use (if you have a choice).

Click Next.

In the next dialog, enter the details needed to phone your Access provider.

Make New Connection	
	Type the phone number for the computer you want to call: Area code:          Area code:       Image: Im
	< <u>B</u> ack <u>N</u> ext > Cancel

Be sure to set the correct country.

Click Next, then click Finish in the next display.

You are then returned to the Dial-Up Networking folder.

Back in the Dial-Up Networking folder, select the new icon you have just made, then take **Properties f**rom the File menu.

Demon Internet ? 🗙

IPX/SPX Compatible		
<u>     TCP/IP</u> <u>     TCP/IP</u> Settings		
OK Cancel		

READW95.doc 26 01/03/2023

Advanced options: Clear these options unless specifically needed.

*Allowed network protocols*: Ensure that TCP/IP is ticked and that all other protocols are cleared.

Then click the **TCP/IP Settings** button, and set your Access Provider's DNS addresses in the following dialog.

TCP/IP Settings	? ≍			
Server assigned IP Specify an IP address	address			
IP <u>a</u> ddress:	0.0.0.0			
Server assigned na	me server addresses			
Primary DNS:	158 . 152 . 1 . 58			
Secondary D <u>N</u> S:	158 152 1 43			
Primary <u>₩</u> INS:	0.0.0.0			
Secondary WINS:	0.0.0.0			
<ul> <li>✓ Use IP header <u>c</u>ompression</li> <li>✓ Use default gateway on remote network</li> </ul>				
	OK Cancel			

*IP address*: Select Server assigned IP address unless specifically told otherwise by your Access provider.

*Name server details*: The numbers needed here are the ones you entered when setting the TCP/IP properties. (See Step 3.)

READW95.doc 27 01/03/2023

When you have finished setting these Server details, click **OK** until you get back to the DUN folder.

The next step is to dial up

## Step 6. Dialling up

**Note**: Dialling up can be automated by using a 'script' containing the information needed for logging in. However, this requires extra software as Windows 95 itself doesn't include dialling scripts. If you have suitable scripting software (or you would like to know how to acquire this), see Step 7, 'Using a Dial-up script '. Otherwise, dial up as described here.

### Dialling up without a script

### Preparation

If you will be dialling up without a script, you first need to arrange that a terminal window will be displayed after dialling for you to enter the different pieces of information that your Access provider requires.

To do this, select the appropriate Connection icon in your Dial-Up Networking folder, take the Properties option from the File menu, then click the Configure button under the modem in the Connection details that are displayed.

Demon Internet ?X
General
Demon Internet
Phone number:
Area code: Telephone number:
0845 • 353 5666
Country code:
United Kingdom (44)
✓ Use country code and area code
Connect using:
Sportster 28800 External
<u>C</u> onfigure Server <u>T</u> ype
OK Cancel

When the dialog appears, click the **Options** tab and tick the option to **Bring up terminal** window after dialing.

Sportster 28800 External Properties
General Connection Options
Connection control Bring up terminal window <u>b</u> efore dialing Bring up terminal window after dialing
Dial control Dial control Operator assisted or <u>m</u> anual dial <u>W</u> ait for credit card tone: 8 = seconds
Status control           Image: Display modem status
OK Cancel

Then click **OK** back to the Dial-Up Networking folder.

## When you are ready to dial

Double click the appropriate Connection icon in your Dial-Up Networking folder in order to dial in.

You will then see the following dialog

🛃 Connect To	? ×
🖳 🏈 Der	mon Internet
<u>U</u> ser name:	
Password:	
	Save password
Phone <u>n</u> umber:	0845 353 5666
Dialing from:	Default Location
	Connect Cancel

Leave the slots for your username and password blank, and simply click the **Connect** button.

After dialling, a terminal window will be displayed - probably containing brief details of the connection that has been made, followed by one or more requests for information.

The likely sequence is login name (ie. user or 'nodename'), password, then protocol (normally PPP).

To each such request, type the appropriate details and press RETURN. After the last item, click **Continue** (or press F7).

**Note**: If you are in the process of signing up for a Trial account with Demon, you need to give **olr** as both your login name and your password. On subsequent occasions, however, you will need to give the host name and the password you chose for your Demon account. (Remember to make a note of these!) Note too that you may see a message later advising you that your Services file is not any good, but in this case (but only this case), you can ignore this message.

When you are connected, you will see a 'Connected to' dialog showing your Access provider.

Run the Turnpike Connect program which you should already have set up to use the Microsoft Winsock (by taking 'Winsock Used' from the Configure menu).

#### When the following message appears

READW95.doc 32 01/03/2023

Click 'Connect now' to send and receive email and news.

## Step 7. Using a Dial-up script

Typing the different pieces of information your Access provider requires every time you connect can be tedious. A better solution is to set up a 'script' that will provide this information for you.

Windows 95 doesn't normally include a scripting tool. To get this facility, you need to add either the Dial-Up Scripting Tool from the Windows 95 CDROM, or the Internet Jumpstart Kit provided as part of Microsoft Plus, or the Dial-Up Networking upgrade for ISDN - or one of the third-party scripting programs that are available.

If you don't have any scripting software at the moment, you can download a copy of the basic Microsoft scripting tool software from:-

#### ftp://ftp.demon.co.uk/pub/mirrors/turnpike/win95/dscript.exe

Stored alongside this software is a file called demon.scp which provides the basis for a suitable script for Demon customers. This script may also be adaptable for use with other Access providers as similar procedures are used by most Access providers.

We suggest you create a Win95 directory within your main Turnpike directory, dial up without a script, and use Turnpike's FTP program to copy these files to your Turnpike\Win95 directory. Then install the scripting tool and the script as described below.

#### To install the scripting tool

The first step is to extract the various component files that go to make up the Dial-Up Scripting Tool.

dscript.exe is a self-extracting .exe file, so just double-click the file to run it.

Next go to the Start menu and select Settings, Control Panel. Double-click on the Add/Remove Programs icon then, when the dialog appears, click on the Windows Setup tab, then click the Have disk button.

When the 'Install from disk' dialog appears, click the **Browse** button and select the **rnaplus.inf** file from your Turnpike\Win95 directory - then click **OK**. You will then see a panel containing the single entry **Slip and Scripting for Dial-Up Networking**. Tick the box beside this entry, then click **Install**.

When you return to the Add/Remove Programs dialog, click OK.

To install the supplied script

Open the **Dial-Up Scripting Tool** now shown in the Start | Programs | Accessories menu.

When the Dial-Up Scripting Tool dialog appears, check that the appropriate connection is selected, then use the **Browse** button to pick out the **demon.scp** file from your Turnpike\ Win95 directory.

e Dial-Up Scripting Tool	
Connections:	Script File <u>n</u> ame: C:\TURNPIKE\win95\Demon.scp
	Edit Browse
P <u>r</u> operties	Start terminal screen <u>m</u> inimized
	Apply Close Help

(If you want to see what is in this script or you expect to need to change it, click the **Edit button** when you return to the Dial-Up Scripting Tool dialog.)

Back in the Dial-Up Scripting Tool dialog, check that the option to **Start terminal screen minimized** isn't ticked, then click the **Properties** button underneath the list of connections. When the Connection Properties dialog appears, click the **Configure** button below the modem details, click the **Options** tab of the Modem Properties dialog and ensure that neither **Bringup terminal window** option is ticked.

When you've done this, click **OK** back to the Windows Desktop - pausing only to accept the offer to save the changes you've made to the connection if this is offered.

### When you are ready to dial

Double-click the appropriate connection icon in your Dial-Up Networking folder as when dialling up without a script.

However, this time when the dialog appears, check that your username and password are entered in the slots provided before clicking the **Connect** button. (Note: These details may be filled in for you as your username is automatically saved while there's a special option to save your password.)

READW95.doc 35 01/03/2023

You should then go straight through to the 'Connected' dialog without any further intervention from you - at which point (if not earlier), you should run the Connect program and allow this to continue.

Further information about Turnpike is available on the Turnpike Home Page,

http://www.Turnpike.com

Turnpike, Dorking, Surrey RH4 1HN, UK Tel: +44 1306 732300,

Fax: +44 1306 732325, Email: info@turnpike.com
