### **Company Profile**

The <u>company profile screen</u> captures essential information about your company. Required fields are indicated by an asterisk (\*).

If your company has an existing web site elsewhere, provide the URL (e.g. http://www.site.com) and visitors will be able to link to your main site from the site you are creating here with MARKETbuilder.

"Full Company Name" refers to the full legal name of your company or organization. "Short Company Name" refers to an abbreviation or acronym under which your company or organization may be known. For instance, the organization "International Business Machines" is also known as "IBM". MARKETbuilder allows you to include both names so that customers find you quickly and easily no matter which name they use.

For additional help please visit our main web site at www.marketbuilder.com

### **Site Builder Profile**

The <u>site builder profile screen</u> captures information about the person who builds the site and who will be the administrative contact for the organization hosting the MARKETbuilder web site. Please note that the administrative contact can be different from the sales contact displayed on the web site.

For additional help please visit our main web site at www.marketbuilder.com

## **Contact Person Profile**

The <u>contact person profile screen</u> captures information about the person who will be the sales contact for the company. This information will be displayed on your web site.

For additional help please visit our main web site at <u>www.marketbuilder.com</u>

### Marketing Promotion

The <u>marketing promotion screen</u> captures information that will assist people in finding your web site.

The industry category listbox contains the industry classifications currently recognized by MARKETbuilder. Select the category here that best describes your company. This information may be used in a 'yellow pages' search.

The keywords you provide are submitted to registered Internet search engines. The arrow-buttons on the left side allow you to change the order of the keywords (doubleclick on a keyword, then click on the arrows to move it up or down in the list). Put the most important keyword on the top of the list.

For additional help please visit our main web site at www.marketbuilder.com

# **Keywords Dialog**

In this dialog, you specify a keyword which will be used to help identify your site to search engines.

### **Marketing Identity**

The <u>marketing identity screen</u> allows you to provide a logo, a slogan (or 'mission statement'), and some text describing your company. Supplying a logo ensures that customers will easily recognize you, and the company slogan will leave a lasting impression with your customers. This information will be displayed on the front page of your site, and will be one of the first things that visitors to your site will see.

Browsing for the company logo graphic invokes a dialog box that allows you to select a graphics file. Depending on the size and type of your graphics file, MARKETbuilder may resize and convert the content of the original file into a web browser compatible format, and write the output to a new file. Your original file will not be changed in this process.

For more information on how MARKETbuilder handles graphics files, **S** click here.

For additional help please visit our main web site at www.marketbuilder.com

### **Marketing Content**

The <u>marketing content screen</u> allows you to define up to 10 key marketing messages about your company. These messages will be grouped under a title. You can select a pre-defined title or create your own title for these messages.

Each message consists of a headline and a text body that can be created and edited in <u>a separate dialog box</u>. As a guideline, each key message should be made up of a single sentence that summarizes an important marketing statement (the 'headline'), and a paragraph that embellishes on this statement (the 'body text').

For additional help please visit our main web site at <u>www.marketbuilder.com</u>

# Key Message Dialog

The key message dialog allows you to define key messages for your company.

To be effective, these messages should be concise.

#### **Catalog Screen**

The <u>catalog screen</u> displays a list of all entries. For your convenience, you can sort the items by price, item name, or description by clicking on the column headers. However, the catalog entries will always appear on your web site sorted by pricing category (promotional items first), followed by item name (in alphabetical order).

In the <u>catalog item dialog</u>, you describe goods and services you may want to advertise or offer on your web site. Each entry consists of an item name, a short description of the product or service, pricing information, and an optional picture or graphics file.

A small icon (depicting a 'P' or 'R') to the left of each entry indicates whether you selected regular price or promotional price to be displayed for that item and that the item is available for on-line ordering. If no icon is displayed, you have no price displayed on the site and customers must contact you via conventional methods (phone, fax, etc.).

Depending on your company's activities, the title 'catalog' may not be appropriate for display on your web site. You can change the title by selecting one of the suggested titles in the drop-down box or you can create your own title (e.g. "Millenium Deals") by writing into the selection box.

Clicking on the 'Add' and 'Modify' buttons opens a dialog box for creating and editing catalog entries. Mandatory fields for each new catalog item are item name, description, category (product or service) and currency definition. You can select the pricing category for each item (i.e. whether you want to display no price at all (inquiries only), the regular price (e.g. list price), or the promotional price (with regular price as reference) by clicking on the radio buttons for these categories.

For additional help please visit our main web site at www.marketbuilder.com

# **Catalog Item**

The <u>catalog item</u> dialog allows you to add/modify entries in your online catalog. You may define up to 25 items here.

# **Payment Options**

The <u>payment options</u> dialog allows you to add/modify entries in your online catalog.

### **Design Screen**

The <u>design screen</u> allows you to choose a template and a color scheme that defines the overall 'look and feel' of your web site. The template thumbnail images provide you with a layout outline of the first page of your web site. The appearance of the thumbnail images changes according to the selection of color combinations on the right side of the screen. The 'Preview' function will display the appearance of your web site in detail (using your template and color scheme selections).

For additional help please visit our main web site at <u>www.marketbuilder.com</u>

#### **Submission Screen**

The <u>submission screen</u> prompts you to specify your host information and displays the results of your submission.

If you are submitting your site to Maximizer BusinessNet, the upload mechanism will prompt first-time users for their user ID, password and destination directory (which will be used to build a unique URL or web address). Users who are already registered will provide a user ID and password in a login dialog.

If you are submitting your site to another ISP, you will be prompted for the necessary login information (user ID, password, server, and directory). Please contact your service provider for this information and record it for future reference.

MARKETbuilder will inform you about the progress of the upload, including when the upload is successfully completed.

If there was a problem during the transfer of your site's information, this screen will suggest a course of action or a method for contacting technical support.

Thank you for using MARKETbuilder!

For additional help please visit our main web site at www.marketbuilder.com

#Enter your company's full business name here. (maximum 39 characters) For example, **International Business Machines.**  Enter your company's full business name here. (maximum 39 characters) For example, **International Business Machines.**  Enter your company's short business name here. For example, **IBM.** (maximum 39 characters) Enter your company's street address here. (maximum 39 characters)

Enter your company's street address here. (maximum 39 characters)

Enter your company's city here. (maximum 39 characters)

Select your company's state/province here.

Enter your company's ZIP/Postal code here. (maximum 19 characters)

Select your company's country of origin here. (maximum 39 characters)

Enter your company's existing URL here. (maximum 119 characters)

If your company already has an existing web site, you should integrate it with the one you are currently designing by specifying it here.

Note that the address provided must be prefixed with either '**http://**' or '**https://**'.

Enter your preferred client ID here. (maximum 39 characters)

The contents of this field will be used to create your login ID and URL. In the event that your choice is already in use, you will be promoted to select something different.

The only allowable characters in this field are the letters a-z (both upper- and lower-case), the digits 0-9, and the characters  $\cdot$ ,  $\cdot$ ,  $\cdot$ , and  $\cdot$ .

Enter a verification passphrase here. (maximum 39 characters)

In addition to your password, (which will be your primary means of identifying yourself), this phrase is required to ensure you can be reliably identified in case there is a problem with your password.

Enter your password here. (maximum 16 characters)

To make your password as secure as possible:

Never use any sequence of characters readily associated with you or your company.

Do not use common words or phrases (i.e., dictionary words, names/places, etc.,)

**Do not** write your password down - select something some that is easy enough for you to remember without doing so.

**Do** use a combination of both upper- and lower-case characters, as well as numbers.

Re-enter your password here, for confirmation.

Press this button to complete your registration.

Press this button to cancel the current operation - without exiting the wizard.

# **Registration Dialog**

The <u>registration dialog</u> will be displayed the first time you submit your site information to a host server.

## Legal Information Dialog

Once you have carefully reviewed the information displayed here, please indicate your acceptance of the terms and conditions in order to proceed.

# Login Dialog

This dialog prompts you for your user ID and password information.

## **Registration Dialog**

The <u>registration dialog</u> appears the first time you submit to a server. It prompts to provide the necessary contact information.

This includes the string you wish to distinguish your site on server, and ultimately will be used to form your URL.

Also, you will select both a password and a challenge phrase.

## **Options: HTML**

The <u>HTML Options page</u> allows you to specify whether or not you wish to enable HTML tags in the body of <u>certain text fields</u>. If this option is enabled, the text you submit to the server will be parsed to check for the presence of <u>certain HTML tags</u>. If any are found, the text will be formatted according to the tags.

# **Options: Proxy**

The <u>Proxy Options page</u> allows you to specify the location of a proxy server. Only use this option if necessary.

This dialog displays copyright & version information.
## **Open Image Dialog**

This dialog allows you to browse for (and load) an image on your hard drive.

## Notes:

- All images having more than 256 colors will be converted to JPEG. Images with 256 or less colors will be converted to GIF.
- Progressive JPEG is supported, although this image type cannot be resized or displayed in the preview window.

For a list of formats this application supports, **S** click here.

## HIDR\_MAINFRAME

Winsock was unable to initialize socket support.

This viewport displays the current session status.

Press this button to exit the wizard without submitting your site.

Note that you will be prompted to save your current information.

Choose a style template upon which you wish to base your site. The thumbnails display the general 'look & feel' of the selection.

Choose a color scheme from this list that you feel would best compliment your site. Each graphic represents symbolically the various color combinations.

Press this button to preview your site in your default web browser.

Specify the title used to refer to the 'key messages' section of your site. (maximum 39 characters)

This list displays the items you have currently defined in your catalog.

Press this button to define a new catalog item.

# **Registration Dialog**

#### Welcome to MARKETbuilder

This tool allows you to create and manage a professional-looking e-commerce web site.

The wizard organizes the process of developing your site into a series of clear steps.

As you progress through these steps, you will be prompted to provide information about your company and its offerings. This information will be used to construct your web site.

Once you have provided all the necessary information and are satisfied with your site's content, the wizard will produce a package file. This package file can then either be transferred immediately to the server, or written to your hard disk for later uploading.

For a quick checklist of information you should have available, see [before you begin]

For a step-by-step overview of each screen in the site construction wizard, click here 🔟

For a summary of what's new in this version of MARKETbuilder, click here **5**.

#### What's New in Version 2.2

There have been numerous enhancements and changes made to the product since version 2.0. Many of these changes have been as a response to requests made by our customers.

The more important changes include:

- Updated templates
- Improved catalog entry interface
- <u>FTP support</u>
- Ability to save sites locally in HTML format
- Optimized win32 executable
- Modified file format
- Improved image-handling support

## Legal Notice

"The service of delivering the shopper's order or inquiry request to the merchant is provided by Maximizer EC Services Inc. Maximizer EC Services Inc. does not guarantee the accuracy or reliability of this information nor does it assume any responsibility for any liability or obligation associated with the transaction. Any liability or obligation for this transaction shall be held by the shopper and the merchant."

"Maximizer EC Services Inc. does not guarantee the level of security for the encryption method used. Maximizer EC Services Inc. reserves the right to terminate the message forwarding service without notice."

Select this option to save your current web site to a local file folder. The site will be exported in HTML format. This can be useful if you may need to perform further processing.

For example, some users may need to send this information to a co-worker via email. Others may need to further edit the content with a special HTML editor.

## Save your web site to a file folder

There are situations in which FTP may not be the best method for transferring your generated HTML files to your host. For instance, if you are running your own Web Server, it may be more convenient if you can save your files directly into your local directory. Another possible reason is that your ISP may be using a proprietary protocol for file transfer.

This feature will save the entire generated web site into a directory you specify. Once the files are saved, you can transfer them to the host server through whatever mechanism that is most convenient.

This option can be selected from the Files menu or from the submission page.
