WBOG for Windows

This is the classic cube game.   Words can be formed by clicking on the cubes in the cube grid.   Letter cubes can only be used once per word and you can use as many cubes as you wish so long as they are adjacent to each other (either up/down, across or diagonal).   A word must be at least 3 characters long.   When you have found a word, click on the letters and click ENTER WORD.   The computer will let you know if it does not understand this word and give you a chance to add it to the dictionary.   When you make a mistake, click BACKSPACE or CLEARWORD to erase part or all of the word in progress.   When you can no longer make any words, click DONE and the computer (called Joshua in this game) will find as many words as it can and show them to you in the list to the right.   Words that are different from those you have already found will be marked with an asterisk.   You can click on any word in the list and click DELETE WORD to remove it from future games.

Timed games are an option for those of you who want the extra challenge.   Simply click on TIMED GAME and click the desired number of minutes to play.   Then return to the main screen and click NEW GAME to start a new timed game.

Click the HIGH SCORE button to see a list of the top ten finishes since you started playing.

When done with the program and you wish to Quit, simply close the window or press QUIT GAME.

I hope you enjoy the program.
