

doesTreatFilePackagesAsDirectories

setTreatsFilePackagesAsDirectories:

Running the SavePanel

(BOOL)doesTreatFilePackagesAsDirectories

Tests whether the SavePanel displays file packages to the user as directories. Returns YES (the default) if the user is shown files and subdirectories within a file package. Returns NO if the user is shown only file packages with an indication that they are directories.

setTreatsFilePackagesAsDirectories:

setTreatsFilePackagesAsDirectories:(BOOL)flag

Sets the SavePanel's behavior for displaying file packages to the user. If flag is YES, the user is shown subdirectories within a file package. If NO, the user is shown only file package names, with no inner directories.
