Notification of state change didHide:

didUnhide:  
willSelect:  
didSelect:  
willUnselect:  
didUnselect:

didHide:sender

Received from the Preferences application when the application hides itself. This gives the Preferences module the opportunity to deallocate resources or do other clean up that might be appropriate (such as removing a timed entry).

didUnhide:

didSelect:sender

Received from the Preferences application just after this module's interface is displayed in the Preferences window. A willSelect: message precedes this message.

willSelect:, willUnselect:, didUnselect:

didUnhide:sender

Received from the Preferences application when the application is unhidden. This gives the Preferences module the opportunity to initialize itself, if necessary.

didHide:

didUnselect:sender

containing the buttons and other controls of your Preferences display.

#### `willSelect:sender`

Received from the Preferences application when this module's interface is about to be displayed in a Preferences window. Immediately following a `willSelect:` message, the module's top-level View (as returned by `view`) is made a subview of the Preferences window, and then the Layout object receives a `didSelect:` message. The module then receives `didSelect:`, `willUnselect:`, and `didUnselect:` messages.

#### `willUnselect:sender`

Received from the Preferences application when the module's top-level View is about to be removed from the hierarchy in the Preferences window. Immediately following a `willUnselect:` message, the module's top-level View is removed from the hierarchy, and then the Layout object receives a `didUnselect:` message. The module then receives `didUnselect:`, `willSelect:`, and `didSelect:` messages.

`didUnselect:`, `willSelect:`, `didSelect:`
