Lookingupreferencedocumentation;¬Looking up reference documentation

1   Open the Project Find panel.

2   Perform a search for definitions of project symbols.

3   Click the book icon to the left of a search-result item.

4   Examine the documentation displayed in the code editor.

The Project Find gives you access to documentation on the OpenStep frameworks imported by your projects. For applications, these frameworks always include the Application Kit and Foundation. By linking descriptions in the documentation to individual results of searches for symbol definitions, Project Find enables you to navigate quickly to a particular description.

_Find_LookUpReference.eps ¬

The related passage in the documentation appears in the code editor. From here you can browse through the rest of the file; if the file you're viewing is a class or protocol specification, you can go to the beginning of the file to read an overall description of the class (or protocol) and its methods. Project Builder puts documentation files in Non Project Files so you can access and examine these files throughout a coding session. As with code files, you can display documentation in a separate tear-off window or in an additional view in the code editor.
