

## Rose Mode

In Rose mode, multiple copies of your text extend outward from a center position (like flower petals).

When you select Rose mode, the Rose Settings Panel appears in the upper right hand corner of the screen. Use the controls on this panel to set the start and end gray levels, the number of copies, and the degrees of arc containing the copies. The copies will be evenly distributed through the chosen arc. To fill a complete circle, use 360 degrees.

The start and end gray controls override the Main Parameters Panel Text Gray control. The Outline or Fill options, if applied, can override the start and end gray controls.
