

Scaling

You can scale text in the horizontal and vertical dimensions using the Scale sliders and text fields. The scaling amount is represented as a percent, with normal being 100%. The sliders go to 500% but if you need more, enter the scaling amount into the scale textfields and the sliders will adjust to the new maximum. See *Slider Controls* under *Controls* for more information about controlling the sliders.

Scaling directions are absolute; the image is scaled horizontally or vertically regardless of the image's rotation.

TextArt: The Manual:
