

Layout Board Documents

Layout Board document files have a TM.textArtf suffix and an icon which has the upper half of the TextArt program's icon with the word TMDocf on top. These files record all of the graphic objects in a Layout Board window.

To open a Layout Board document, choose **Open** from the Window menu and select the file you want.

To save a Layout Board document, choose **Save (command-S)** or **Save As (command-S)** from the Window menu while the Layout Board window you want to save is the key window. If you choose Save As or if you choose Save for an unnamed document, TextArt will prompt you for a file name. You can also choose **Save To** from the Window menu and select the TMTextArtf file type.

To restore a Layout Board document to its previously saved version, choose **Revert to Saved** from the Window menu. TextArt will ask you to confirm this with an alert panel.
