

## Tool Palette

Use the Tool Palette to select the Selection tool for selecting objects and various graphic object tools for creating geometric shapes and text. To choose a tool, click on it.

By default, the Tool Palette is set to always be visible when you're working in a Layout Board window and to always be placed at the upper left corner of the current Layout Board window. You can change this with the **Preferences** command (**command-!**) under the Window menu (see *Preferences*).
