

Fonts

To change fonts in the Image Display Window, bring up the Font Panel by pushing the Fonts button on the Main Parameters Panel or by choosing **Font Panel (command-t)** from the Font menu and choose the font you want.

To change the type style, use the Font Panel or Font menu commands **Bold (command-b)**, **Italic (command-i)**, **Heavier**, or **Lighter**.

To change the font size, you can use the Font Panel, the **Larger** or **Smaller** commands from the Font menu, or the Font Size slider or text field in the Main Parameters Panel. If you want a larger font than that offered by the slider, enter the size into the Font Size text field.
