

## Circle

In Circle mode, your text is placed around the circumference of a circle. TextArt calculates the appropriate radius of the circle based on the length of your text. However, you can modify this in the Radius Control panel, which appears in the upper right corner of the screen when you choose this (or Lower Arc or Upper Arc) mode. You can also modify the placement of the text on the circle's parameter. See *Custom Radii* and *Auto Center* for more information about the radius controls.
