

Image Display

The Image Display Window shows your current TextArt image. TextArt updates the image every time you change one of the controls in the Main Parameters Panel or in one of the image control panels (unless you check the Disable Redisplay checkbox in the Main Parameters Panel).

You cannot manipulate the image directly in the Image Display Window; if you want to change the image, use the controls in the various panels.

Click in the Image Display Window to transfer images to a Layout Board window or to copy parts of the image into the Pasteboard (see *Image Transfer*).

TextArt: The Manual:

Image Display Window	p. 9
Main Parameters Panel	p. 10
Disable Redisplay checkbox	p. 35
Transferring images	p. 42
