

AutoCenter

You can use *AutoCenter* to keep text centered in the Circle, Upper Arc, and Lower Arc modes. When you check *AutoCenter* (and uncheck Use Default) TextArt ignores the rotation specified in the Main Parameters panel and places the text so that its center is at the top of the circle. If you move the rotation slider or enter a new value in the rotation text field, *AutoCenter* will be deselected and TextArt will use the new specified rotation to place the text, measuring clockwise from the 9 o'clock position.

TextArt: The Manual:

Circle Text Placement		p. 20
Upper Arc Text Placement	p. 22	
Lower Arc Text Placement	p. 22
