

## Custom Radii

In the **Circle**, **Upper Arc**, and **Lower Arc** modes, TextArt calculates a default radius to fit your text string. You can change this radius by using the radius slider or by specifying a radius (in points) in the radius text field in the Radius control panel. If you do this, the Use Default checkbox will be deselected. At any time, you can check the Use Default checkbox and return to the calculated radius.

You can use custom radii to create similar effects in each of the radial modes. For example, you can make an upper arc effect by increasing the radius in the Circle mode. However, for arcs less than 180 degrees, it is better to use the Upper Arc mode because your text will stay closer to the center of the Image Display Window.

### ***TextArt: The Manual:***

Circle size:		p. 19
Upper Arc size	p. 21	
Lower Arc size	p. 22
