# TextArt Images

TextArt image files   record the parameters and text used to create a specific TextArt image. Image files have an icon with half of the TextArt program icon and the word "Image" across the top, and use the suffix   ™.TAimage.∫

To open an image, choose **Open** from the Window menu. TextArt will open a standard Open panel which lists both images and Layout Board documents. If you choose a file ending with ™.TAimage∫, TextArt will replace your current TextArt image with the image in the file.

To save an image, choose either **Save Image** (**command-E**) from the TextArt **Image** menu, or **Save** from the Window menu while the TextArt Image Display Window is the main window. TextArt will open a standard Save panel to prompt you for a file name.
