Geometric Shapes

You can create straight lines (horizontal or vertical), lines, rectangles, ovals, polygons, curves, and freehand shapes.

To create a geometric shape in a Layout Board window, click on the appropriate tool in the Tool Palette and drag in the Layout Board window. For most shapes, you just drag; for polygons, you click at each vertex of the polygon.

Hold the Alternate key down when you begin to draw to constrain the object's shape in some way.
