Preferences

The **Preferences...** item on the Window menu brings up the Preferences Panel which allows you to specify several options that TextArt will remember between program launchings.

Save & restore Image Window size & position: If you check this box, TextArt will restore the Image Display Window to its size and position from the last time you ran the program.

Hide Image Control Panels when not in use: If you check this box, image control panels that aren't related to the current image will be hidden. This can help reduce screen clutter and help you find the relevant controls quickly.

Open New Layout Board document on launch: If you check this box, you'll automatically get a new Layout Board window when you start TextArt.

AutoHide all panels when working on Layout: If you check this box, the Image Display Window will be miniaturized and all image control panels will be hidden when a Layout Board window is the key window.

Always show Tools when working on Layout: If you check this, TextArt will make the Tool Palette visible whenever a Layout Board window is the key window.

When visible, Tools follow top Layout doc: If you check this, the Tool Palette will always be placed at the upper left corner of the current key Layout Board window.

Knob Size in Layout Board: You can set the size in pixels of the graphic handles (knobs) in the Layout Board windows.

Enter your choices and click **Register Defaults**. If you click **Cancel**, TextArt ignores any preference changes you have made.
