Multiple Offset

You can set the vertical and horizontal offsets between each copy of the text using the Offset controller (the white rectangle in the Multiple image control panel). (See *Special Controls* under *Controls*.) The arrow represents the direction and relative distance of the offsets. Click and drag in the Offset controller; the arrow will track the mouse and the horizontal and vertical offsets will be displayed in the text fields.   You can also set the offset values to any degree of precision using the text fields.

You can get very large horizontal and vertical offsets by dragging the mouse cursor outside the Offset controller.
