**Subject:** IconBuider `Alpha Pattern'

Here's what the `alpha pattern' (the entire area behind the mouse) looks like in IconBuilder:

paste.tiff ↵

But, of course, when you're actually seeing it, the pattern is moving fairly rapidly from upper right to lower left. I've got an Intel based machine with a 101 keyboard. With this set-up, the Page Down key will invoke the pattern as well as the `1' key.

Note: To take this 'picture', I: launched Grab.app; went back to IconBuilder , pressed and held down the '1' key; back to Grab for the selection tool and grabbed the picture from the IconBuilder window (with the CPU beeping angrily at me the whole time). After letting up on the '1' key, IconBuilder locked-up with the pattern still 'running'. I had to kill IconBuilder to make it stop.
