

DataPhile Installation Instructions

NOTE: *If updating from a previous version:*

a. In the Workspace, find
/NeXTLibrary/Receipts/DataPhile<version>.pkg and double-click it. Use the Installer application to delete the old version. After completion of the Installer's deletion, remove the DataPhile.app appwrapper from /LocalApps by putting it into the recycler. This will insure a proper installation of the new version.

1. Double-click the DataPhile_3.1.pkg This will start the Installer.app.
(If you are running NEXTSTEP 3.2, use
NS_3.2/DataPhile_3.1_for_NS_3.2.pkg)
2. Click the Install button.
3. Set the destination for the application. /LocalApps is the recommended place.

4. Select one or more of the computers you wish to install software for.
5. Click Install.
6. After completing the installation, it is safe to install any or all of the remaining packages.
Double-Click it to install:
 - DataPhile_Aux.pkg, the tutorial and auxilliary files for DataPhile.
 - DP_French.pkg, the French language translation for DataPhile.
 - DP_German.pkg, the German language translation for DataPhile.
 - DP_Online_Manual.pkg, the online manual for DataPhile.
 - DP_Filter.pkg, the DataPhile filter program.

- DP_Importer.pkg, the program to import fixed length data into DataPhile.

7. Launch DataPhile, and license it with your license string. Problems?
505-345-4800

8. Review and set your preferences with **Info->Preferences...**
