

CreatelImage files

paste.tiff ↪ CreatelImage files can be dropped into any Create Document. You can also add them to your File->Gallery->My Art menu for instant access. These samples show you many different techniques (for example, the Picture_Frame was a simple cylinder rendered in 3D Reality, pasted 4 times, flipped and rotated, and the two sides were combined with a polyline and "mask grouped" to form the miters. Load it into Create and take them apart by ungrouping to learn more!)
