

# Create Document files

paste.tiff ↵

Each of these documents can teach you something about Create. The bath, by Carla Barlow, shows use of alpha elements, patterns, cylinder effects, etc. Chemistry shows how you can use Create for any applied science. The CD\_package shows our inhouse design process for the CDROM packaging scheme. The ColorMap is useful for calibrating colors on a QMS printer. Even kids can make great things in Create, as IzzySantaReindeer shows! Use Create for weekly scheduling. The Computer Science logo shows how to make exciting logos, and then turn them into splines via Object->Spline->Make Spline - which allows you to view the PostScript of fancy fonts on machines which don't have the fonts. And Tyler Janisch's unforgettable Rutger, from the Philip K. Dick novel, "Do Androids Dream of Electric Sheep?" and the movie Blade Runner, was last year's winner of the Stone Art contest.
