Welcome to the MacHack 1997 Papers

Once again we bring you a collection of facinating technical papers that promise an interesting tidbit for everyone. We appreciate the excellent work of our author/contributors this year, and hope you, the reader, will make good use of this material.

Inside you will find the following papers:

• Jim Trudeau, "PowerPlant: A Third-Generation Macintosh Application Framework"

• Adam Treister, "Location Independent Internet Config"

• Gavriel State, "QuickDraw Gems"

• David Slik, "Drawing to the Screen from an MP Task"

• Nat McCully, "Enabling Your Application for Multi-Byte Text"

• Rainer Brockerhoff, "On Having Two (or More) Heads, Real-Time Programming in Spite of the MacOS"

• Jonathan Rentzsch, "Implementing Threaded IO on the MacOS"

Many of the papers in these proceeding are accompanied by sample code and examples which you can find on the MacHack 1997 CD-ROM.

Thanks for your reading time!
