This application allows to generate INSERT, DELETE, UPDATE and format SELECT queries from selected database.

In order to generate queries do the following steps:
- Fill database name and connection string fields (use connection string builder – Button on the right hand side of the connection string filed)
- Press **Connect** button
- In left window should be the list of all tables from selected database.
- Select table you want to build queries for and press **Build** button.

To extract the code - press **Copy** button

To format SELECT query, paste query to the right window and press **Format** button
Use Partial Format check box for simple format.

To use Clipboard use **Copy** and **Paste** buttons.
To clean main window use **Clean** button
To print main window content use **Print** button

To extract a list of all fields from selected table use **Fields** button
To generate a assign list for all fields from selected table use **Assign** button
To exit the application use **Exit** button
To view Help use **Help** button.

In order to customize the code use your own names, prefixes and names for objects on Format panel.

If you have any suggestions or problems please send them to andrewss@bigpond.net.au.

Wish you all the best.
