

Welcome To Issue 1.1 of *substance. digizine*.

The following notes are provided if you are having problems installing the disc. If you have problems running the disc, check the file "HELP.WRI" found in the root directory of the CD-ROM.

To install *substance.* to your hard drive, select "RUN" from the Program Manager menu bar and type "D:\INSTALL" ("D" being the letter of your CD-ROM drive). You can also run "INSTALL" through Windows File Manager by logging onto your CD-ROM drive and double-clicking on the "INSTALL.EXE" file found in the root directory of this disc.

The installation program will prompt you for the directory you wish to install the digizine files into, and will also prompt you if you do not have Video For Windows installed on your system. The installation program will copy about 11MB of files to your hard drive. If you do not have this much free space available on your system, you cannot run the digizine. You must also have your sound card and CD-ROM drive properly installed. Please review the "HELP.WRI" file if you encounter any problems running *substance.* on your system.

MINIMUM SYSTEM REQUIREMENTS:

486SX-25 or higher
4 MB RAM
12 MB Free Disk Space
640x480 SVGA display, 256 colors
16-bit sound card
