DISK LABELER (tm) INSTRUCTIONS

Purpose:

To provide handy stick-on labels containing disk filenames and/or catalog information, so that you can tell at a glance which files are on a disk, how the filenames are spelled, and the space remaining on the disk.

Equipment required:

Extended BASIC module, disk drive, printer (capable of printing at least 16.5 characters per inch, such as the TI Impact Printer, Epson, Okidata Microline 83A, Gemini-10, PrintMate 99, etc.)

How to run DISK LABELER:

Insert 4" wide by 1 7/16" long mailing labels in your printer (or use regular printer paper).
Plug the Extended BASIC module into the computer.
Turn on all power switches, console switch last.
Insert the DISK LABELER disk into drive 1.
From the Master Title screen: Press any key.
From the Master menu: Select Extended BASIC.
From the QUALITY SOFTWARE menu: Select DISK LABELER.

How to use DISK LABELER:

ENTER PRINTER DEVICE NAME:

Press Enter to accept the default value of PIO. Otherwise, enter the parameters for your printer, i.e. RS232/2.BA=4800.DA=8

ENTER PRINTER CODE FOR CONDENSED PRINT:

Press Enter to accept the default code of 15, for the TI Impact Printer. Otherwise enter the proper code for your printer, see your printer manual.

ENTER PRINTER CODE TO STOP CONDENSED PRINT:

Press Enter to accept the default code of 18, for the TI Impact Printer. Otherwise enter the proper code for your printer, see your printer manual.

ENTER DATE AS MM/DD/YY:

You may enter any eight characters or press Enter to skip.

To verify your input, the data is presented for review. If it is correct, merely press Enter to go on. If it is wrong, type in the correct data and press Enter.

PRESS 1 TO TEST ALIGNMENT

This will print a test pattern on one label. If the test pattern is not centered on the label, turn the printer off, adjust the labels, turn the printer on, and press 1 again. When you are satisfied that the labels are properly aligned,

press 2 to proceed.

PRESS 1 FOR FILENAMES ONLY

PRESS 2 FOR FULL CATALOG

Choose the type of label that you want.

INSERT DISK AND PRESS ENTER

Remove the DISK LABELER disk (because it cannot be cataloged), insert your first disk, and press Enter. The program will read the catalog from DSK1 and print a label containing the disk name, the space available, the space used, and the date.

If you selected filenames only, the first 42 filenames will be printed on the first label, and up to 48 more filenames will be printed on a second label, for a total of 90 filenames.

If you selected full catalog, the first 21 files will be printed on the first label, and up to 24 more files will be printed on a second label, for a total of 45 files.

PRESS 1 TO READ NEXT DISK

PRESS 2 TO CHANGE LABEL TYPE

TO xxxxxx

AND READ NEXT DISK

PRESS 3 TO END

Press 3 to end, then press QUIT (FCTN =) to exit. When finished, stick the labels on the disk or on the disk envelope. Two labels will easily fit on a disk envelope. If you put the labels on the disk itself, be sure not to cover up the write protection notch. The second label can go on the back of the disk. If you delete a filename, gently draw a line through the name. If you add a file, gently write it on the label. (If the label is on the disk envelope, do not write on the label when the disk is in the envelope.) Many people have found it very useful to have the filename only type label, stuck on the envelope.

You can get labels at computer stores, computer supply stores (look in the Yellow Pages), Sears Business Systems Centers (248 labels for \$3.95), from QUALITY SOFTWARE (300 labels for \$5, postpaid), or from NEBS, 1-800-225-9550, order Product 9811, 2000 labels for \$16.95. (You can split an order with a friend.)

REPLACEMENT POLICY: If, at any time, for any reason, the program fails to perform as specified herein, we will return the original disk, along with \$5, and we will ship you a replacement disk immediately. (Note: Disks obtained from QUALITY SOFTWARE cannot be cataloged or duplicated.)

If you have any suggestions for improvement or would like to see a certain program on the market, please feel free to call or write. Thank you for buying from QUALITY SOFTWARE.
