To Brew or not to Brew...

These labels and it's subsequent disk release sort of happened by accident. I became interested in Home-brewing and being the artsy type I am, needed labels for my brews. Sometimes the labels came before the beer! In any case, the computer seemed like a natural choice for label design and production. Thus I set out on some ambitious label projects.

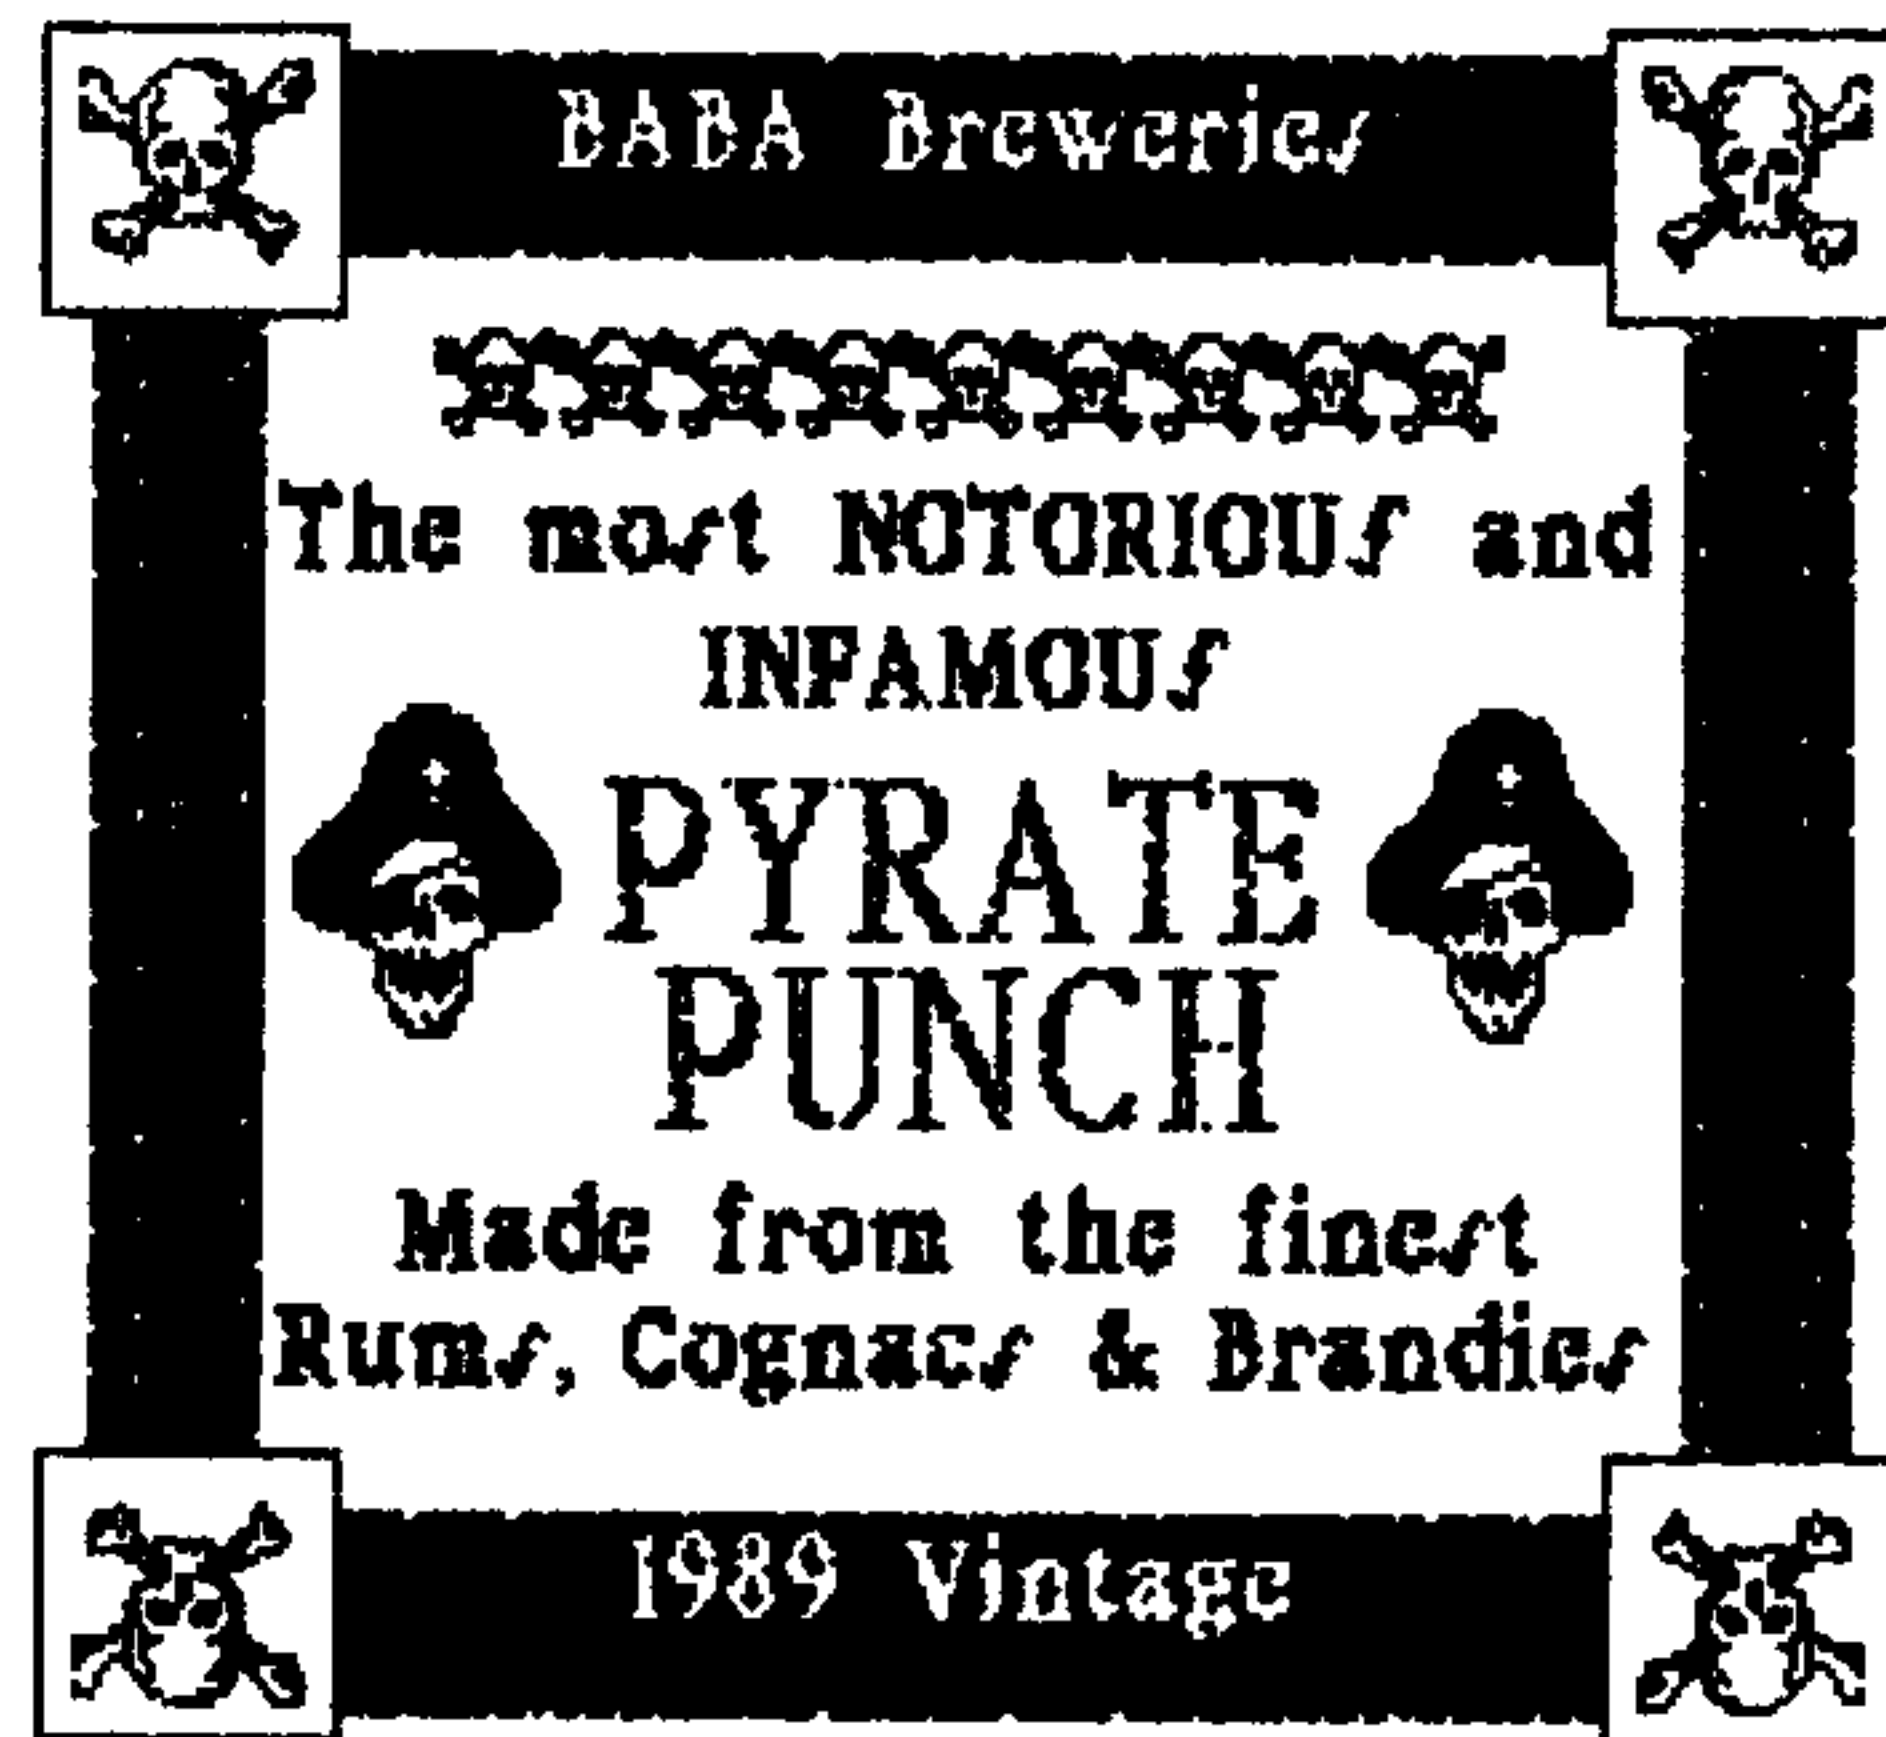

The hardest and most complex one came first, being of course, "Wooly Stout" (an ARC'd file on the disk called, "WSTOUT*ARC"). This label, when archived, has five different overlays drawn in TI-ARTIST. Each overlay is met to be printed in a different color, the abbreviations are as follows; RD=Red, BK=Black, BL=Blue, GR=Green and YW=Yellow (or Gold). The paper must be rolled back to the start with each overlay. Painstaking, yes, that it's worth the result. Of course, if you have a Rainbow printer (which I don't) perhaps there's an easier way to do this. But this way works for me, and with practice you'll find you can get excellent results! The other two 5 color files are also ARC'd on the disk, "SCOTCH" and "FLUFFY".

The other labels are one color labels (be sure to check out the Cock Ale label, it's my personal favorite!). Enclosed also you'll find a LOAD program that allows you to view recipes. And yes, all the recipes are real!

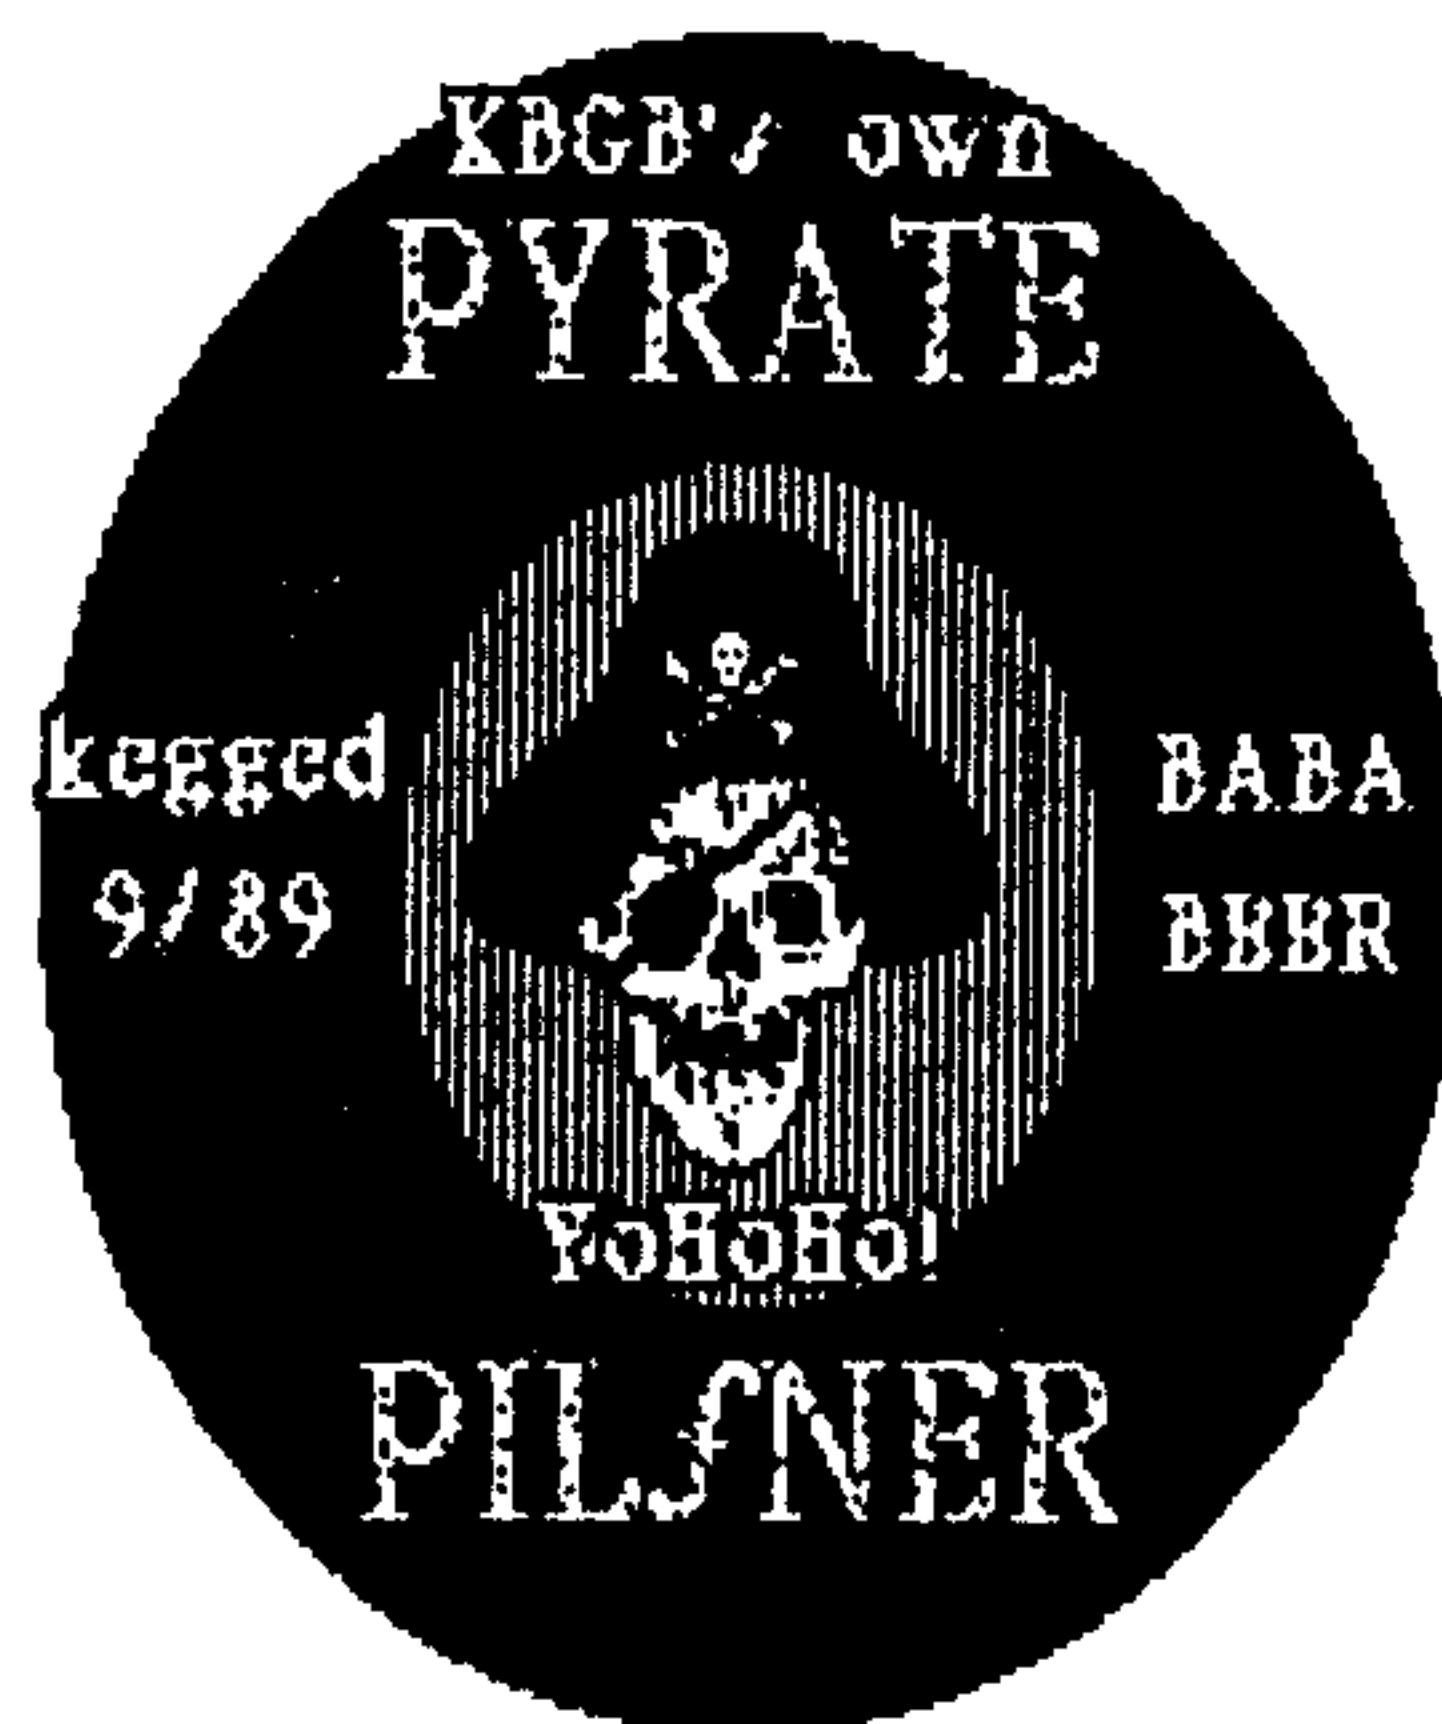

If you try to make any of the brews or have your own, I'd love to hear from you... write to 7647 McGroarty St., Tujunga, CA 91042.

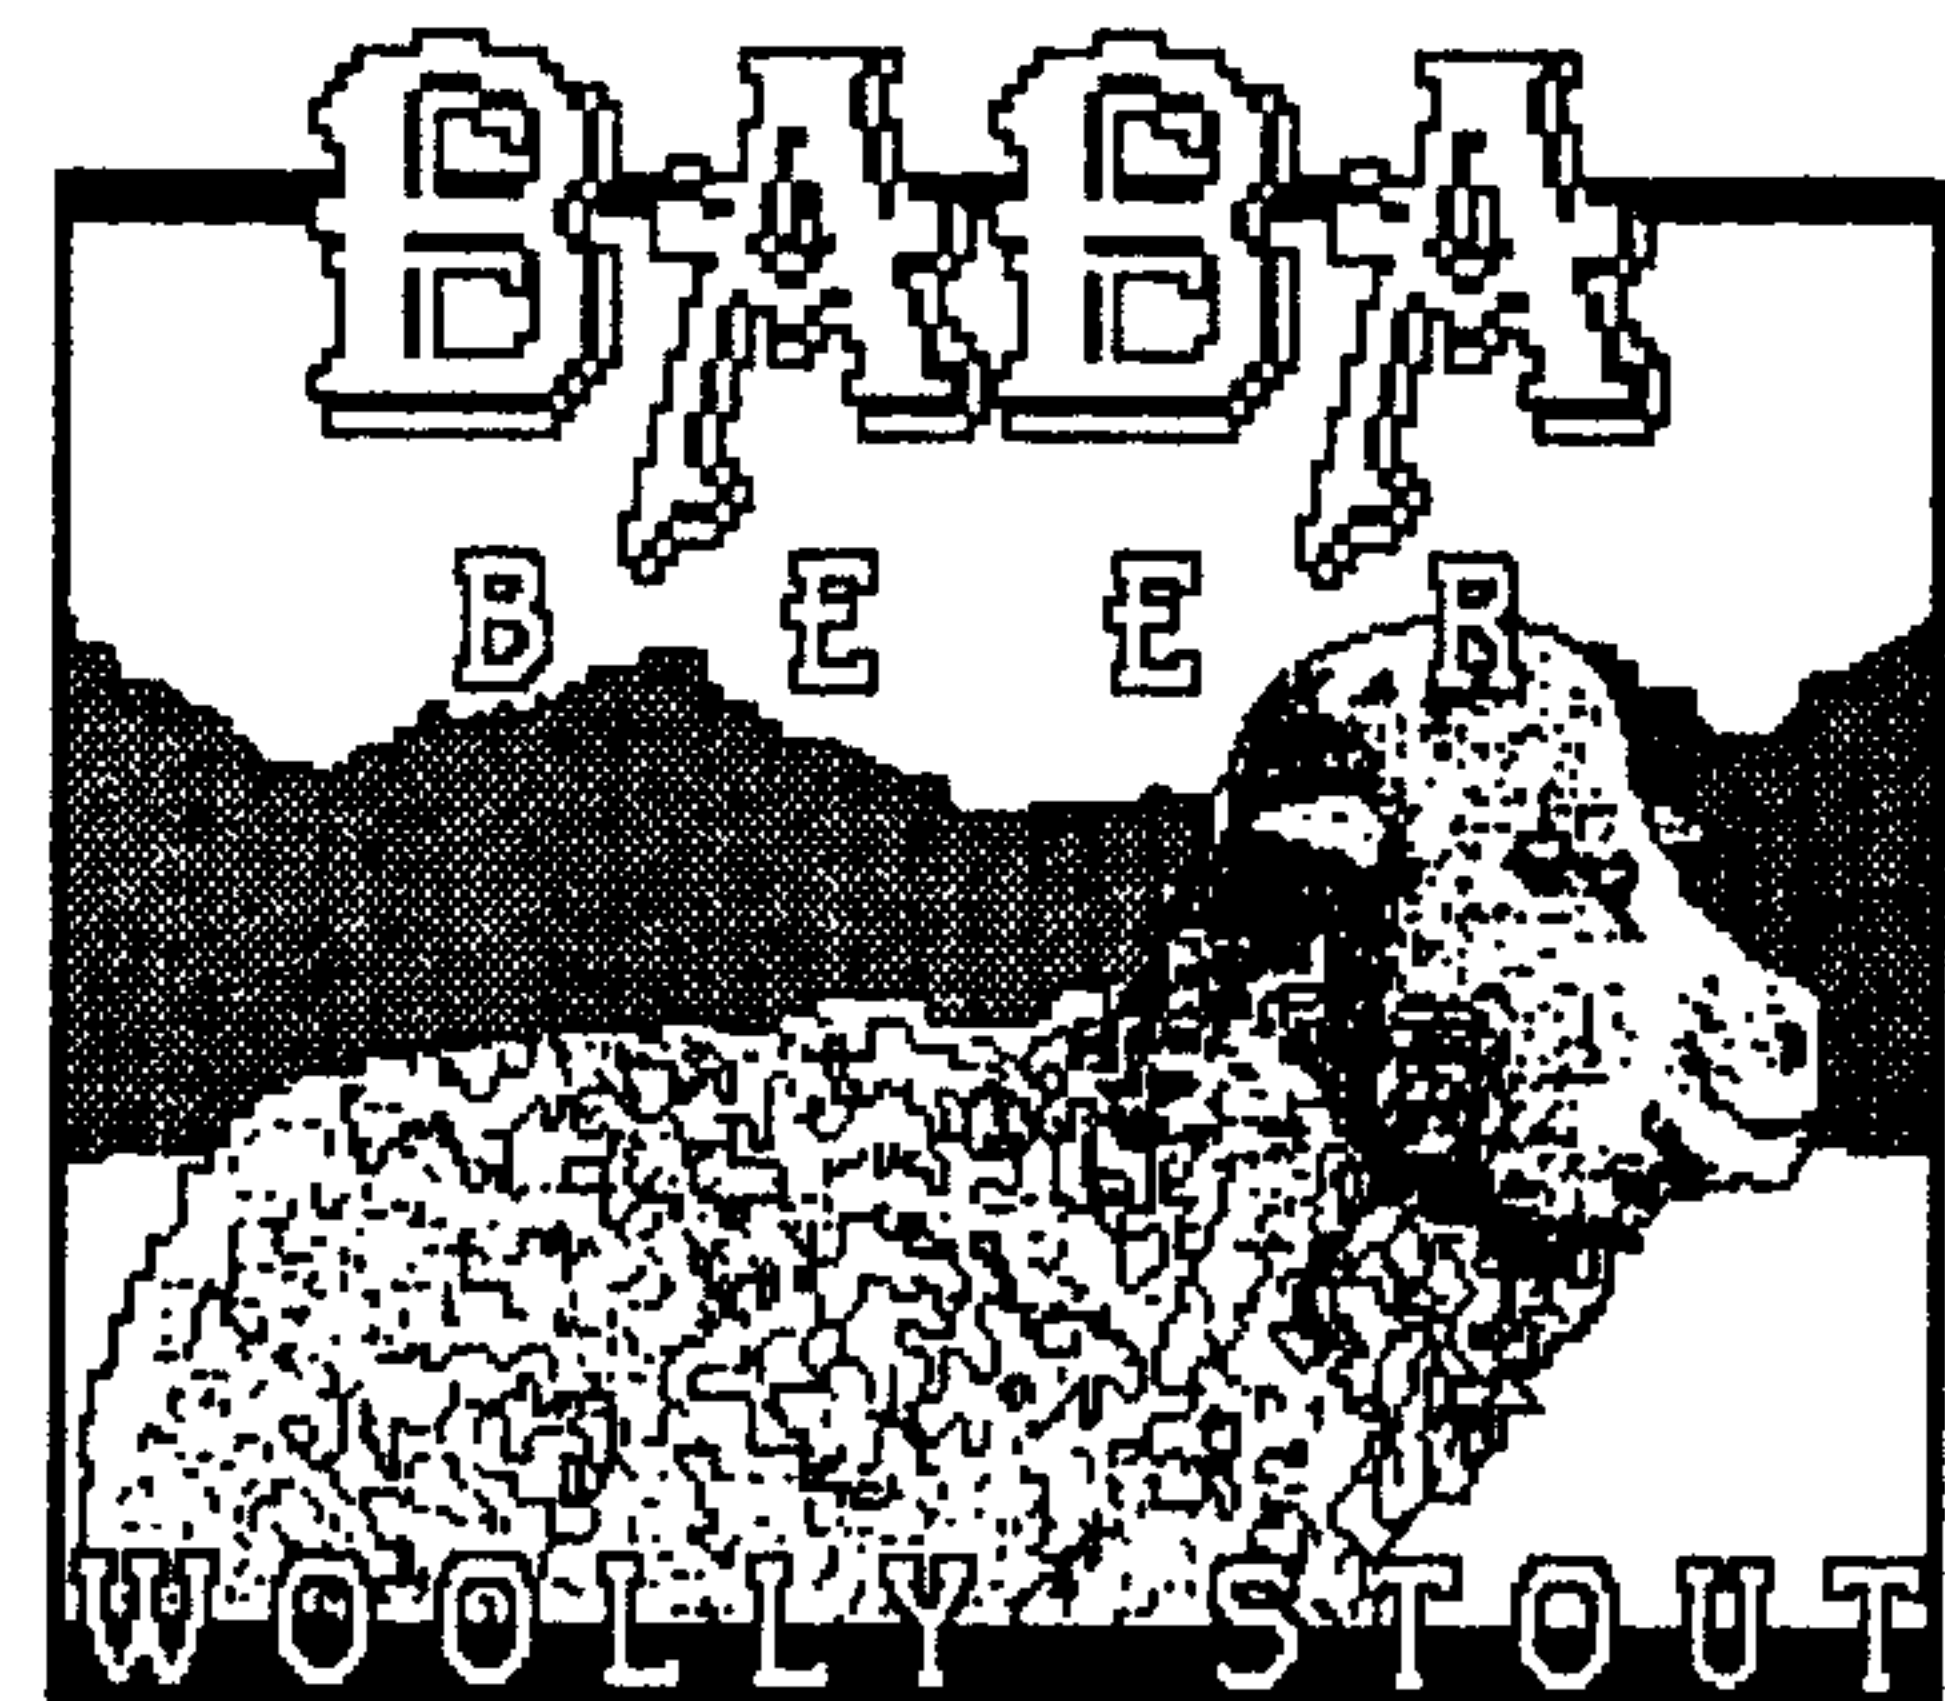

FLUFFY*ARC (5 color files, you must unarchive them first)
