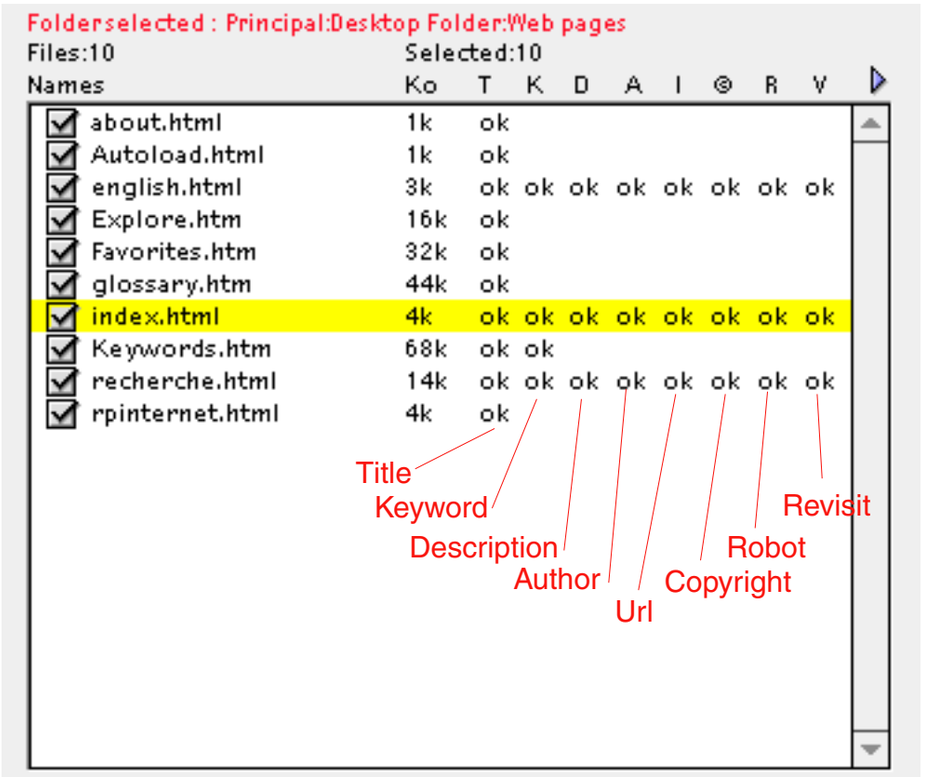
Easy instructions...

Fast Check

1 - Click on "open folder" to select your html files folder.
2 - To see which files have or have not metatags, click on "Select all files" and then on "Check selected".
3 - In the window, you see the name, size (data),<Title> if detected and if metatags are also detected.



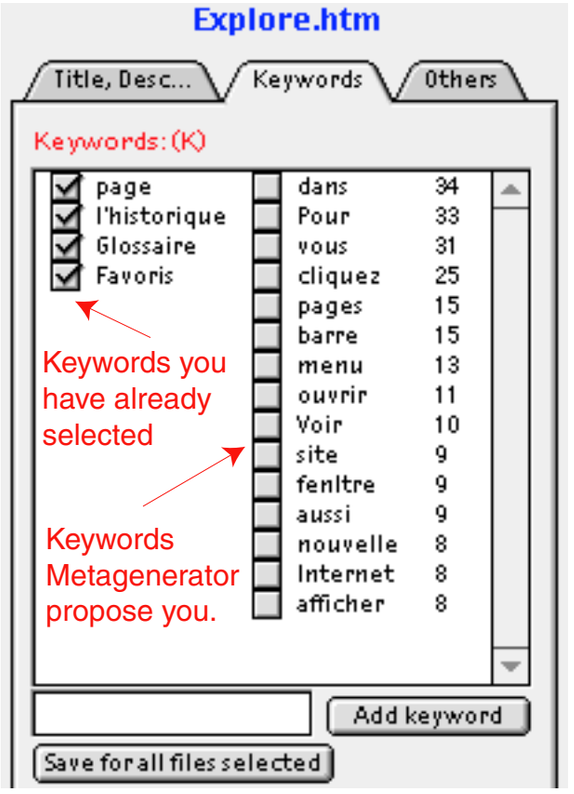
Modify one file

4 - If you click on the name of a file, the right side of the window will show which metatags are used in this file.
5 - The field Title, Description, Author, Url, and copyright are directly editable.
6 - To add or remove Keywords, select them or type a word in keyword field and click "Add".
7 - You can see on the left of the keyword field, all the keys you enter and on the right all the keywords that the software detects in your page, along with how many times the word appears in this page (if you have checked new Kwd option).
8 - The metatag 'robot' and 'revisit' are selected in a popupmenu.
9 - When you have finished your modifications click on "save" to save the file.

Modify several files at the same time

10 - To modify several files, check them in the left window and then modify the field(s) required. When finished, click on Save. All files selected will be saved. For example, you can with this option, easily enter your name as author in all your files.

New in 1.1.1 version or later
The build "engine.html" button is added.
See balloonhelp for usage. .



Don't forget to use Ballonhelp
