Spotlight on SAP DB 7.4

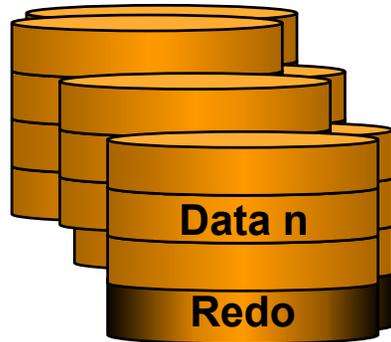

Inside SAP DB 7.4

Version 7.4

Version 7.3

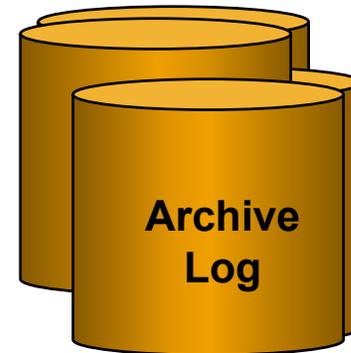

Data-Devspaces

System-Devspace

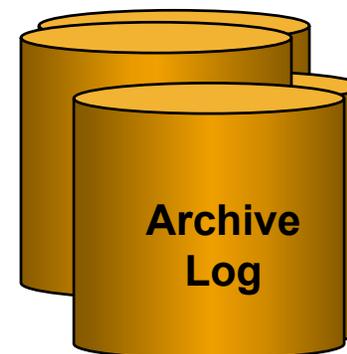

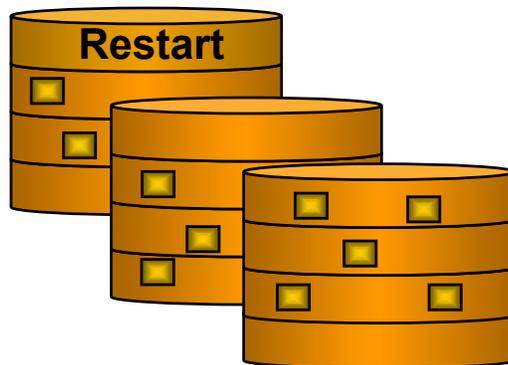

Log-Devspaces

NOW:

Data-Volumes

Log-Volumes

A new Converter

- **System devspace is removed. No hotspot when writing the Converter during Savepoint**
- **Increased concurrency on the converter**
 - ◆ **Converter is divided into several independent parts synchronized by latches**
- **No customizing of the Converter Cache
=> Single Configuration Parameter**
- **Converter can dynamically grow or shrink**
 - ◆ **Online Add Devspace without limits (MAXDATAPAGES, MAXDEVSPACES)**
 - ◆ **Drop Data Devspace (not yet implemented)**
- **Highest ever used data page number is independent from the number of converter pages**
 - ◆ **Oversized databases can easily be decreased by restoring the data into a smaller amount of data volumes**

A new Logging

- **Separate Before and After Images**
 - ◆ Before images are stored in transaction bound Undo-Containers
 - ◆ After images are stored in the archive log
- **Concurrent writing of Before Images**
 - ◆ Because of the transaction bound Undo-Containers
- **Checkpoints are Obsolete**
 - ◆ Database can be restarted when archive log is missing
 - ◆ Any database backup can be used for database copy

Document Repository and XML Indexing

DBAnalyzer

- Rule-based expert system to watch SAP DB instances
- Collects statistical and monitoring data
- Collects system messages
- Supports remote access
- Detects and reports
 - Low cache hit rates
 - High I/O load
 - Low hit rates of DML commands (Select, Update, Delete)
 - Log queue overflows
 - User lock collisions
 - Command timings
 - Timings and frequencies of system locks
