G400 Bump-mapping patch:
Adds Environment Mapped Bump Mapping to the retail version of Expendable. This patch will update the retail version of Expendable with the same features/functionality as the Millennium G400 bundled version. This patch is meant for G400 owners who did not receive Expendable bundled with their card. The version of Expendable that comes with the G400 already supports bump-mapping.

Joystick patch:
There is a problem which can affect the English and German retail versions of Expendable which causes the game to not recognize some joysticks and joypads. Download and install this patch to resolve the problem
