

CORRECT, CONTROL, AND ... CONNECT

FLIGHTCHECK®

Correct your files for before the output process using FlightCheck, the industry-standard preflight software.

FlightCheck verifies critical elements, such as colors, fonts and images assuring validity. After verification, it reports a menu of possible problems like missing images or fonts; even embedded fonts within EPS files! FlightCheck takes you into the document and directly to the issue. FlightCheck then "collects" all of the needed elements for the job, including images and fonts!

FlightCheck is a "must have" for anyone in graphic arts.

The dialog (left), is the FlightCheck® Results screen. This example shows 19 potential printing problems and possible remedies for each.

MarkzScout™

Control and monitor your workflow 24 hours a day, 7 days a week.

MarkzScout™ is the first cross-platform workflow application that can actually look inside native digital documents. Based on your workflow rules and actions, MarkzScout automates several key tasks like image correction, automatic decompression of files, printing to proof devices and automatic PDF creation to name just a few.

MarkzScout™ will automate your tasks, check your files and make your life easier!

MarkzScout™

The example (above), shows MarkzScout in action — automatically converting BMP image files to TIFF's. Many other steps can be added, quickly and easily!

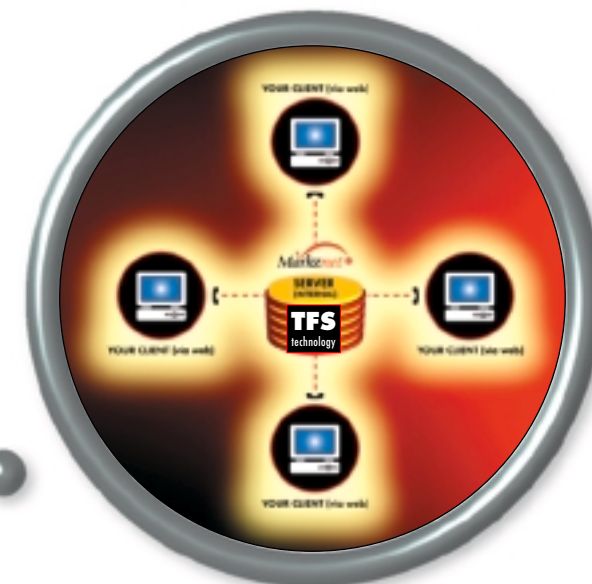

OUR VISION. YOUR SUCCESS.

Markznet™

Connect to your customers using Markznet™, the online job-ticketing, preflight and sending system.

Experience the speed of the Internet with the power of preflighting. Designed for printers and publishers, MarkzNet is a web-based preflight solution with IP-enabled document transfer. Starting with a simple drag & drop, Markznet walks your users (clients) through your job ticketing and preflight system via their web browser. Available for Mac or PC, Markznet checks most major DTP file types and can be linked to other eCommerce systems.

Markznet — Your front door to eCommerce for digital printing!

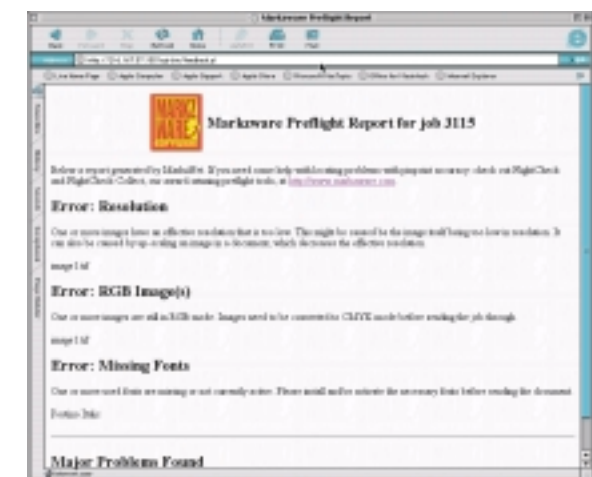

Using your Linux, Unix, Windows, or Mac server, MarkzNet links via standard "cgi," "Perl" or other database and web scripting techniques to provide lightning fast forms, preflight results and reports.

TFS
technology

"TFS" stands for "TrueFileSpec." Within this text file sits your preflight preferences and other information which will "control" the client versions out in the field with your customers or potential customers. Further job ticket data will be embedded in this file so that you can do what you like with this information.
