

### **Version 7.7.1**

10 September 2003

- \* Added the option to encode email addresses in HTML code and put this in place of the option to qualify URLs.
- \* Improved the layout of the Preferences window.
- \* Fixed a bug that removed space after colons in PHP code.

### **Version 7.7**

30 August 2003

- \* Added the option to automatically check for an update of the program.
- \* Fixed a bug that could corrupt PHP code.
- \* Fixed some minor bugs related to PHP optimizing.

### **Version 7.6.2**

22 August 2003

- \* Added a Help button to the 'Enter Code' window.
- \* Wrote in the ReadMe that a single user license is valid for max. 2 computers.

### **Version 7.6.1**

15 August 2003

- \* Fixed a bug that caused a wrong result when checking tags in xml files.
- \* Fixed a bug that could corrupt css code.

### **Version 7.6**

22 July 2003

- \* Built by a new compiler, prepared for Panther.
- \* Safeguarded by a unique program identification code.
- \* The user can adjust column widths in the Log.

### **Version 7.5.1**

26 June 2003

- \* Fixed a bug that could corrupt PHP code.
- \* The option to remove comments from script code now includes shell-style ("#") comments.

### **Version 7.5**

19 June 2003

- \* Fixed a security issue.

### **Version 7.4**

31 May 2003

- \* Reliable optimizing of JavaScript (.js) and VisualBasicScript (.vbs) files. Previous versions could corrupt code in certain cases.

### **Version 7.3**

(never published)

## **Version 7.2**

15 February 2003

- \* Improved the optimizer engine that handles script code, e.g. JavaScript.

## **Version 7.1.1**

8 February 2003

- \* Added a tip about <NOOP> </NOOP> tags to the Tips window.
- \* Fixed a bug that could corrupt script code when adding Alt attributes.
- \* Added a warning for files in your web folder that have names longer than 31 characters.

## **Version 7.1**

25 January 2003

- \* Offers a choice between date+time sensitive and current date sensitive Smart Handling.
- \* Added a Tips window that appears at startup.

## **Version 7.0**

21 December 2002

- \* The program has been simplified so that it's easier to use and better fits within our range of optimizers.
- \* The functions Check Tags, Check Links and Convert Special Characters have been skipped. These are now only available in HTML-Optimizer Pro and Web Site Maestro.
- \* Smart Handling has been improved and is now date+time sensitive.

## **Version 6.2.1**

12 November 2002

- \* Added support for .vbs files
- \* Removes by default all meta generator tags.

## **Version 6.2**

19 October 2002

- \* Added a wizard to guide you through the configuration process at first startup.
- \* Improved the tutorial and added a test web folder to demonstrate the program's capabilities.
- \* Optimized the application for use with Mac OS X 10.2 (Jaguar).
- \* Improved the optimizer engine.
- \* Less preparation time with link checking.
- \* Fixed some bugs related to working with XHTML files.
- \* Fixed a bug that could cause the application to crash when pressing the View Code button.
- \* Added a horizontal scrollbar to the text fields in order to make the View Code bug fix possible.

- \* Fixed some minor bugs.

### **Version 6.1.1**

30 August 2002

- \* Added the option to remove spurious white space caused by some HTML Editors.
- \* This version is an important bug fix:  
You have a fair chance that any error(s) and/or shortcoming(s) that you may have encountered in the past are over now. We recommend that every HTML-Optimizer User downloads this version.

### **Version 6.1**

6 July 2002

- \* Added a command to the Configure menu to choose a browser to view your web pages. Previously Internet Explorer was always used despite your Internet preferences.
- \* Added a separate HTML Manual - identical to the manual in the program.
- \* Added a Tutorial for First-Users.
- \* Added a Save File command to the File menu that does the same as pressing the Hide button after editing text but without a dialog.
- \* Added a menu command "Check for Update" to the HTML-Optimizer menu.
- \* Made the menu command 'Choose New Web Folder...' more user-friendly.
- \* Any script code between <? and ?> tags is now dealt with separate from the main HTML code and can be controlled by the upper two Script checkboxes in Optimization Options in Preferences.
- \* Fixed a bug in the 'Adding missing width and height attributes' option that caused that it did not work for (graphic) files with a relative path (in subfolders with own index file).
- \* Improved the 'Adding missing width and height attributes' option in such a way that it can add a Height attribute if only the Width attribute is present or add a Width attribute if only the Height attribute is present (previously it only added both if both were not present)
- \* Fixed a bug that caused that space was unintentionally removed from text in some cases.
- \* Fixed a bug that could cause the program to hang when removing redundant editor tags.
- \* Fixed a bug that corrupted php script.
- \* Fixed a 'File not found' error when handling a file from outside the web folder.
- \* Corrected a wrong caption in the 'Remove Comments from (X)HTML Code' checkbox in the Preferences window.
- \* Removed the option to add missing </P> tags because it proved to be unreliable.

### **Version 6.0**

First release of the totally rewritten application on 20 May 2002.
