What is Xiino Cruiser?

Xiino Cruiser is a Windows based software used for creating “Cruiser” files. Web pages built and stored on a PC are converted to “Cruiser” files and can be browsed by Xiino. A “Cruiser” file is downloaded to a Palm device by HotSync and can be browsed by Xiino.

Main Features

- Sync Function
 - To browse and convert web sites on your PC to “Cruiser” files
- Bookmark Edit Function
 - To collect the Bookmarks of Xiino by HotSync and to edit them on your PC
- Conduit Function
 - To HotSync (synchronize) the “Cruiser” files and “Bookmarks” of your PC and Palm Device

Operating Environment

Supported PC OS version: Windows 95/98/NT

Hard Disk: at least 3Mb (during installation)

When creating “Cruiser Files”, it is important to make sure that there is enough hard disk space to allocate the multiple web sites for the cruiser file.

Connectivity: Internet connection

Software: Palm Desktop Software and Internet Explorer 4 and above.

Installation

Launch the installer for Xiino Cruiser and follow the instructions according to the screen.

(Specific instructions are in Readme.txt)

Once installation has been completed, from the Start Menu of Windows, select Program, and you will find the option called “Xiino” has been added.

Preparations/Prerequisites

In order to recognize the Username after Xiino Cruiser has been installed, as well as if Xiino has been installed, perform another HotSync operation.

Startup

From the Start menu, go to Programs -> Xiino -> Xiino Cruiser to start the program which will open the Xiino Cruiser Window.

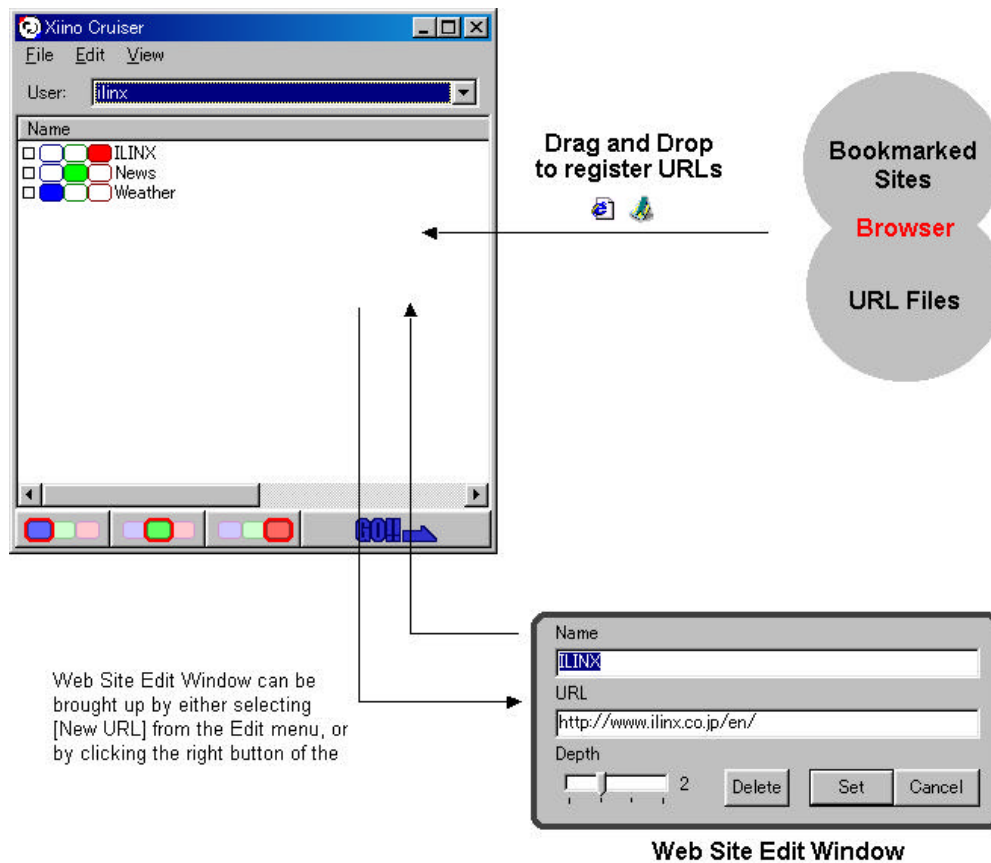

Sync Function

The [Sync Setting Window] is for registering websites when in sync mode

Web Registration

To list the web sites on your Xiino Cruiser, select “New URL” of the “Edit” menu, and then input the “site name” and “URL” in the “Web Site Edit window.” Or drag and drop the bookmark files and URL files from the web browsers* to the “Web Site List Window”.

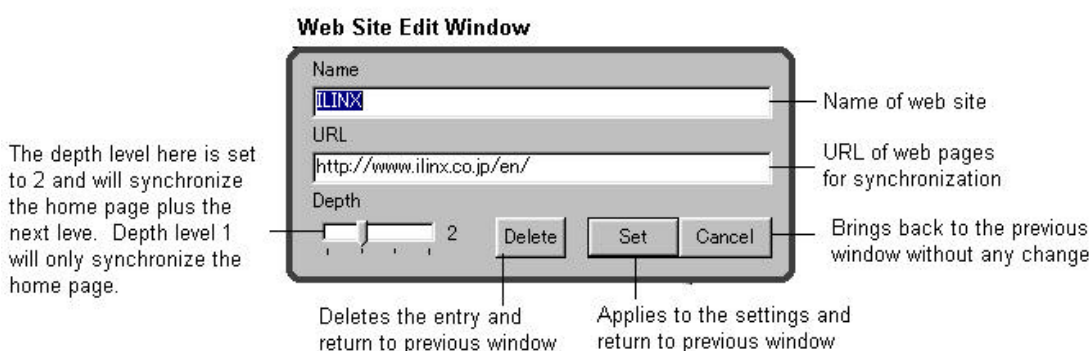

* Supported web browsers are IE 4.0 or newer, or Netscape Navigator 4.0 or newer

Web Listing and Deleting

Double-clicking “Site Name” can open by selecting “Site Name” and “Edit” from the “Edit” menu, or the “Web Site Edit Window”.

The “Site Name” and “URL” can be changed. The larger the “Web Depth” number is (the number of hyperlinks on the page), the more files are stored. Web sites can also be deleted

Web Depth of Synchronization

[Web Depth] appoints the times to trace a hyperlink while synchronizing. If the number is bigger, the times to trace a hyperlink will be increased, then it is possible to collect more many web pages.

Important Notice

The size of “Cruiser” files will be larger if the number of [the depth of synchronize] is increased. On condition that the capacity of memory space in Palm OS device is less than the size of “Cruiser” files, it is unable to transfer “Cruiser” files via HotSync.

Set up the [Web Depth] when you have verified that there is enough memory capacity.

Also, the available range to synchronize via Xiino Cruiser is limited for hyperlink, which belongs to the same Web site. Synchronize will not be performed if the hyperlink set up to other site.

Group Configuration

In “Sync Configuration Window”, it is possible to set the registered web sites in groups by color. To carry out the group (color) configuration, click the corresponding “Group” check box of the Site Name on the left hand side.

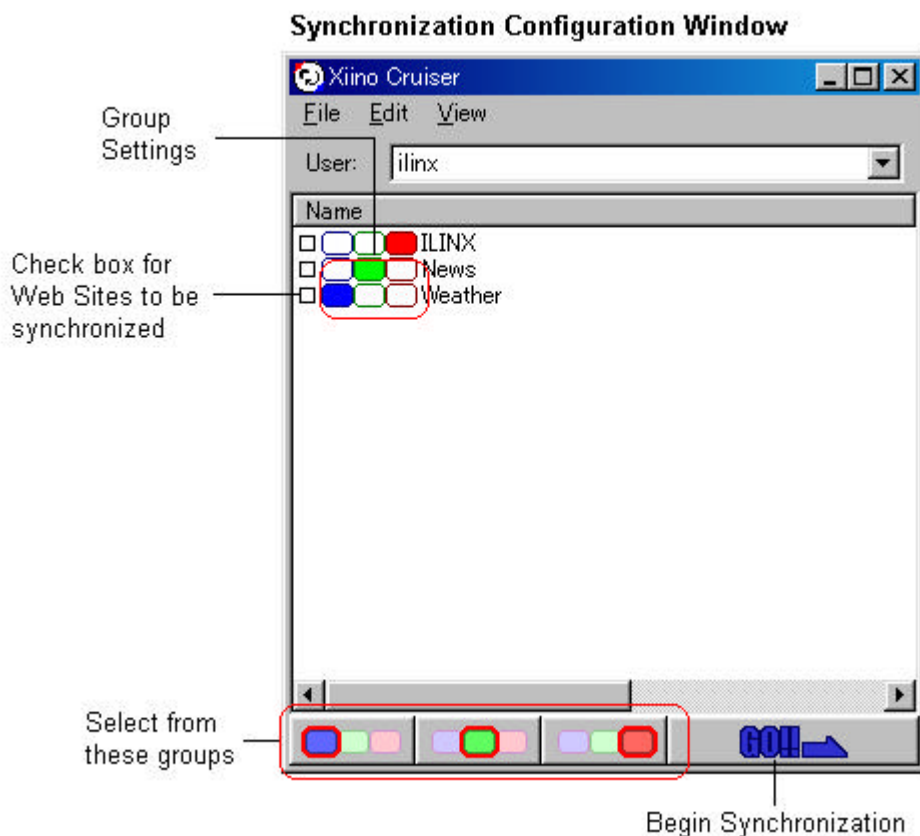

Apply to Synchronize Web sites

Web sites that have a checkmark on the left hand side of the Site Names are targeted to be synchronized. Also, it is possible to collect and assign every group.

In order to select the Group (color) unit, click the selected Group (color) check box in the left hand side of “Synchronization Configuration Window”.

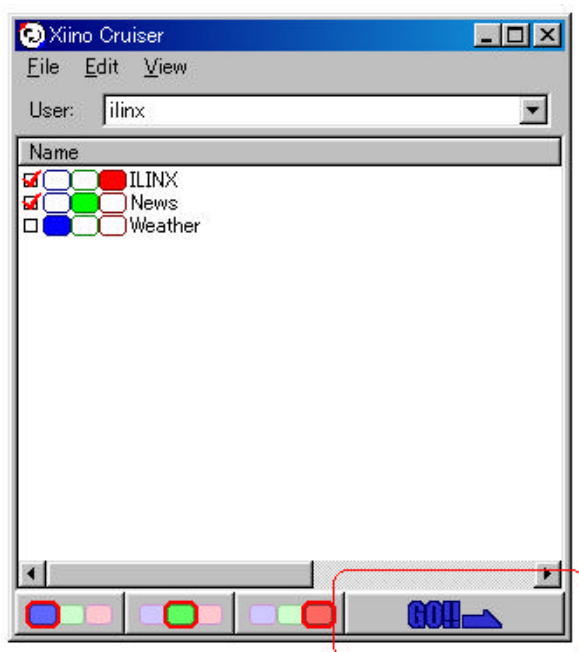

Web

To list a Web site, start by setting a group color. Click the button on the left side of the Web site, and then select the group color by clicking the group button at the bottom left on the “Web Site List Window”.

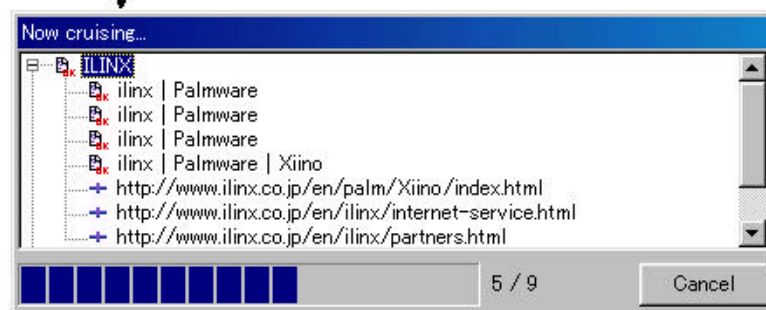

After listing the web site, click the “GO” button on the bottom right of the “Web Site List Window”. Then connect to the Internet and start cruising.

While cruising, the following screen is displayed.

Synch Configuration Window

Synchronization Monitor Window

HotSync

“Cruiser” files are created after listing. To transfer the “Cruiser” files to the Palm device, use the Conduit function to HotSync the files.

Bookmarks

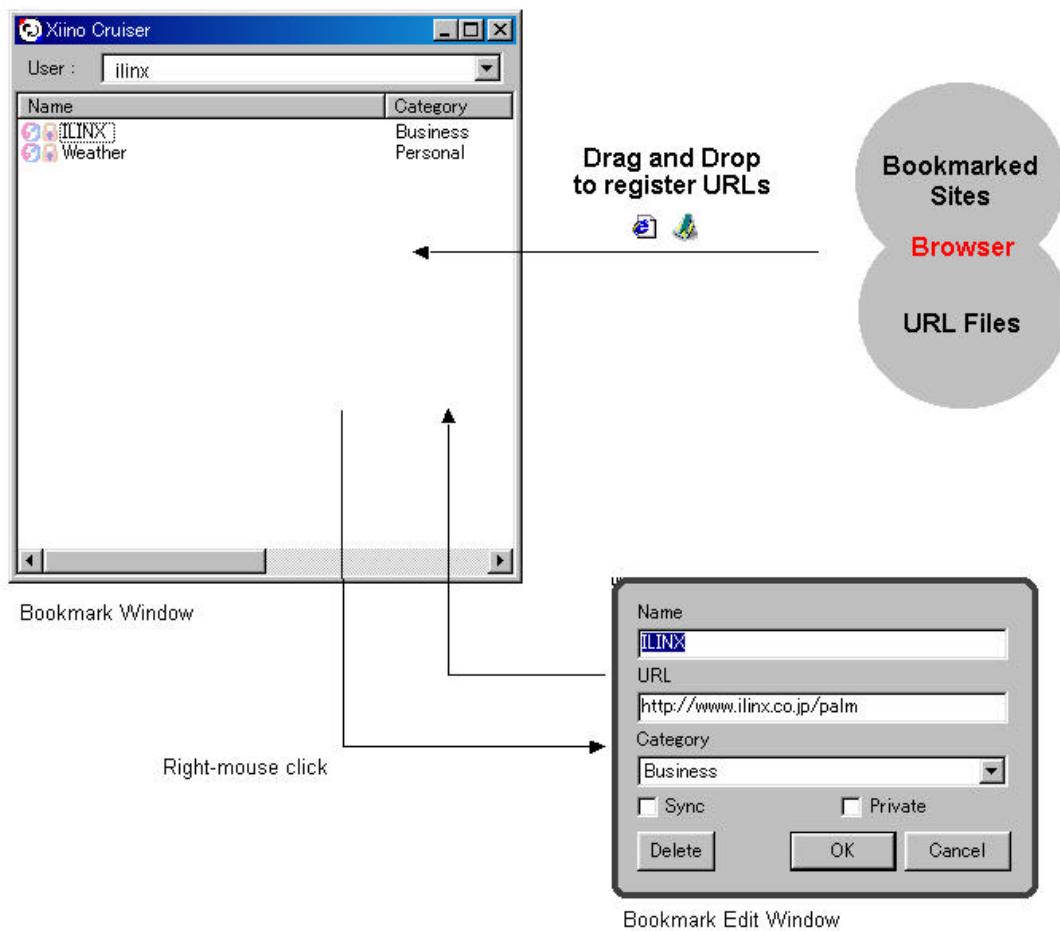

Bookmark Edit Function

To edit the Bookmarks of your Xiino on your PC, use the “Bookmarks Window” screen. To open the “Bookmarks Window”, select “Display of Xiino Bookmarks” from the display menu.

Bookmarks registration

Open the “Bookmark Edit Window”, then drag and drop the bookmark file from Internet Explorer and the URL file to the “Bookmark Edit Window”.

By right clicking on the blank column above the “Bookmark Edit Window”, a new window is opened to enter the bookmark.

Bookmarks Edit

To open the "Bookmark Edit Window", select "Bookmark Names" and select "Edit" of the "Edit" menu, or double click "Bookmark Names."

The "bookmark Name" and "URL" can be changed where you can configure to "Category", "Sync", "Private" can be configured.

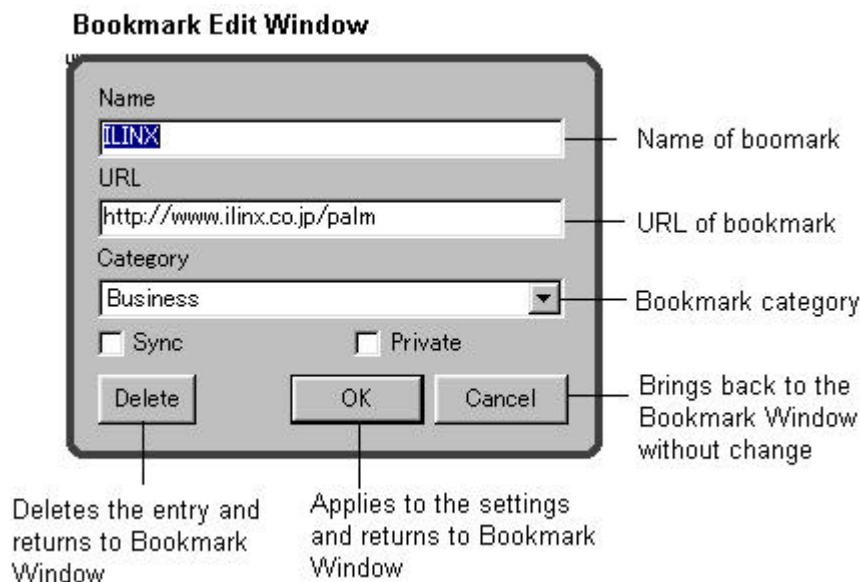

When "Sync" is checked, and during HotSync or performing "Sync" with Xiino, the bookmarked URLs are also synchronized.

It is also possible to set "Sync" and "Private". Select "Sync" to browse the bookmarked web sites of the Xiino Cruiser. Select "Private" to list the bookmark as "Private data". "Private data" is protected by the Palm device and cannot be displayed without a password.

In the case when "Sync" and "Private" are checked, the icons of the "Bookmark Window" list on the left hand side are active.

HotSync

The bookmarks edited on the Xiino and PC are synchronized by Hot Sync using the Conduit function, with the most recent information updated automatically.

Conduit Function

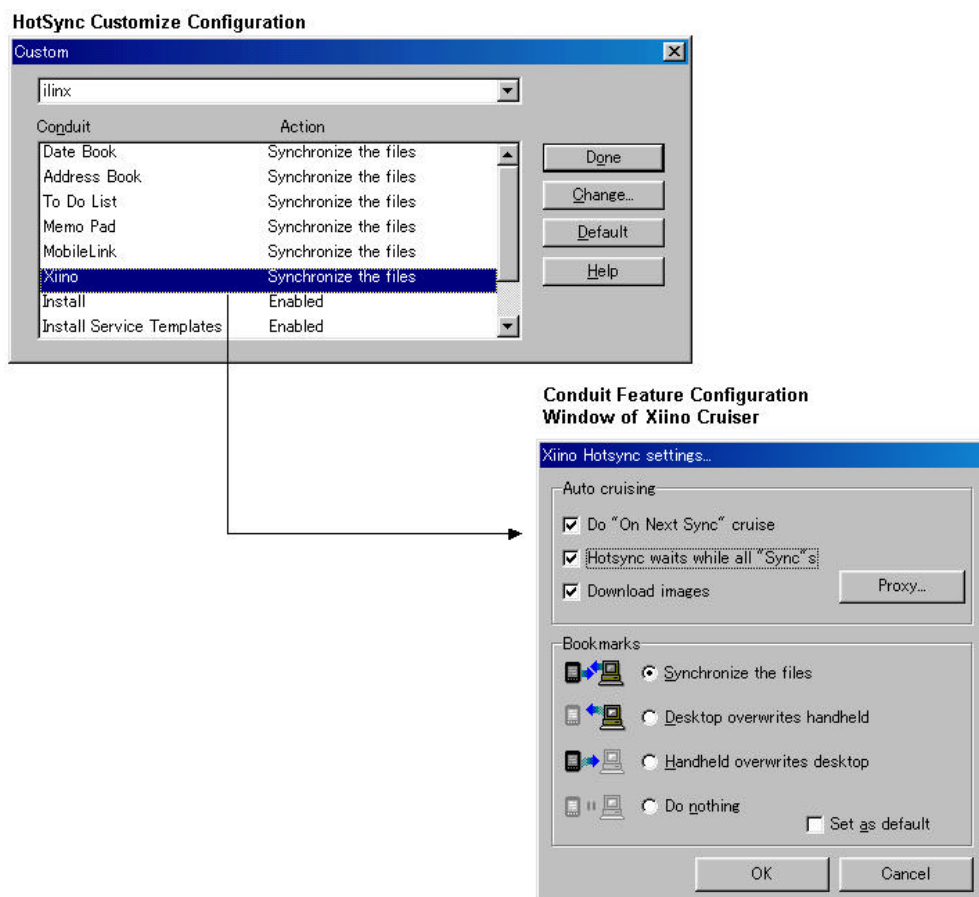

The HotSync manager does the Conduit function HotSync setting.

Due to performing HotSync, transfer “Cruiser” files or bookmark list to the handheld, which is loaded with Palm OS, and to take a Xiino bookmark list in Xiino Cruiser.

Configuration Window

Setting up [Conduit function] while HotSync is operated in [Xiino HotSync settings].

After starting Palm Desktop software, go to the [HotSync] menu and select Custom. Select [Xiino] from the list, and then click the [Change] button, which will open [Xiino HotSync Settings].

Setting up of Automatic Synchronizing

Set up actions while performing Automatic Synchronizing.

Do "On Next Sync" Cruise

When you check this item, the below action will be performed while executing HotSync.

1. Take #Synchronizing set up which is appointed as book mark in Xiino and
Appointment of downloading in cache in Xiino Cruiser.
2. Make a "Cruiser" files by performing Automatic Synchronization.
3. Transfer "Cruiser" files to Xiino

While Synchronizing, [Cruiser file] is created by performing Synchronizing set up of Xiino and Synchronizing set up which is appointed in Xiino Cruiser at the same time.

If you turn off the check box, [Cruiser file] will be transferred to Xiino without Synchronizing while performing HotSync.

HotSync waits while all "Syncs"

When you check this item, after finished Xiino Cruiser Synchronizing action, perform transferring "Cruiser" files and bookmark.

If you turn off the check box, the transfer will be started before creating [Cruiser file], as Synchronizing action and transferring are performed at the same time.

In order to transfer "Cruiser" file, which is created Xiino Cruiser while HotSync, to Xiino, it is necessary to execute HotSync again.

Download Images

When you check this item, graphics are downloaded while Synchronizing of Xiino Cruiser, and then [Cruiser file] included graphics is created.

If you turn off this check box, "Cruiser" files omitted graphics is created.

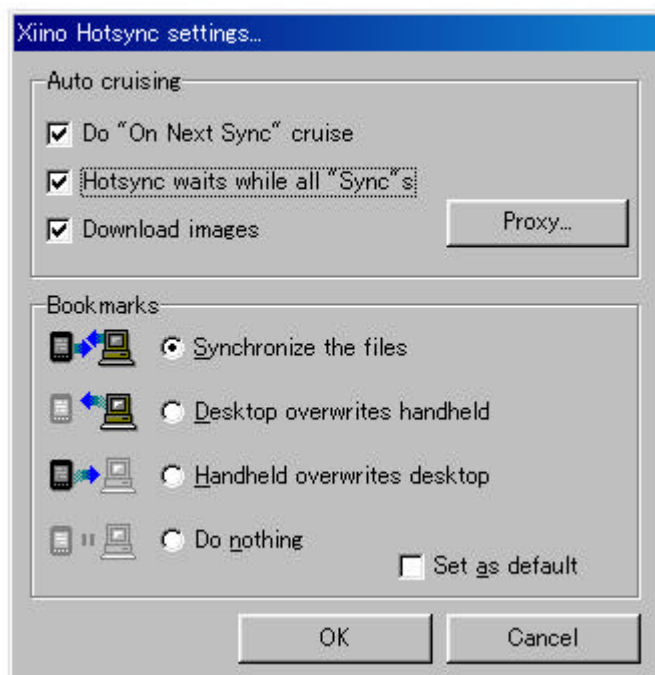

As graphics are omitted, it is possible to create [Cruiser file] of which file size is small.

Set up Proxy

This is a proxy server used while downloading images, which is set exclusively to "pds.linux.co.jp".

Set up window of Xiino Cruiser conduit function

Conduit Feature Configuration Window of Xiino Cruiser

Bookmark Configurations

The following shows the way to configure bookmarks set on Xiino Cruiser to Xiino.

◆ Synchronizing the Files

Web files that are bookmarked are synchronized from the Xiino Cruiser to Xiino.

◆ Desktop overwrites handheld

The bookmarked contents on Xiino Cruiser are applied to Xiino bookmarks.

◆ Handheld overwrites desktop

The bookmarked contents on Xiino are applied to Xiino Cruiser bookmarks.

◆ Do Nothing

Do not bookmark.

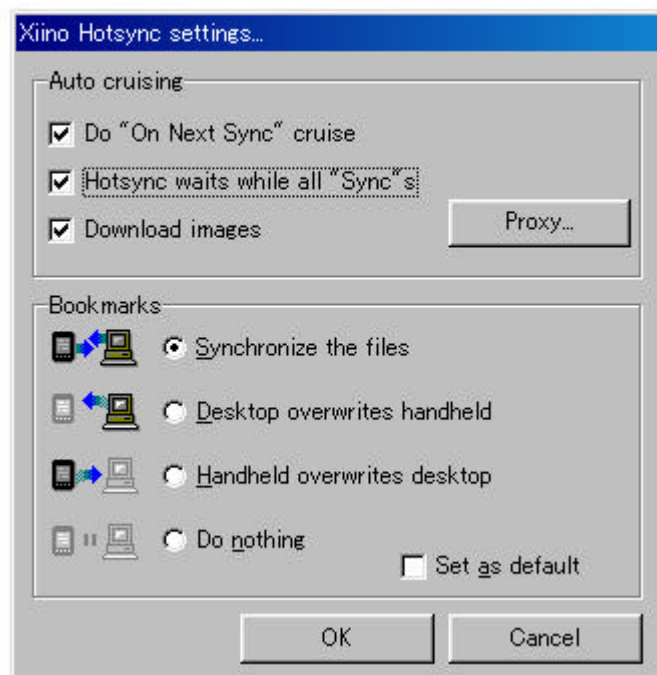

When you click the OK button, the current item and the configured bookmark setup is done.

Caution

In the Automatic Sync Configuration, [when proceeding with Xiino's (On Next Sync)] is selected, please specify bookmark setup other than [Nothing to be done].

If [None] is selected, Xiino bookmarks are not synched, and [Xiino's (On Next Sync)] will not be performed.

Conduit Feature Configuration Window of Xiino Cruiser

Performing Hot Sync

Place the Palm device on the cradle, and then press the HotSync button, which will begin the HotSync operation. From this, the Conduit feature will begin to execute.

Caution

Depending on the setup of Automatic Synchronization, the timing of HotSync may differ.

*1 In Automatic Synchronization, if [On Next Sync] (option from Xiino) is selected, there is synchronization while performing HotSync.

*2 In Automatic Synchronization, if [On Next Sync] (option from Xiino) is not selected, there is no synchronization while performing HotSync.

Troubleshooting

After making a line connection, unable to HotSync with PC

Cause: May be problem with line during connection

Solution: HotSync cannot be performed if there is no line connection. If the telephone icon shows that it is connected, then this shows that the line is connected. Tap the [Telephone] icon; tap the OK button from the [Disconnect] dialog, then the line will be disconnected. If it is still a problem, please refer to your PalmOS device manual.

When performing HotSync, an error appears on the Cruiser File

Cause: The data from the Cruiser Files may have exceeded the memory capacity of the disk space.

Solution: Configure Xiino Cruiser as follows to minimize the number of Cruise Files to be created.

1. Decrease the number of web sites to be synchronized.
2. Decrease the number of levels to be synchronized.

Also, please remove applications, channels, cache files, and others that you do not need, and free up more memory space in the PalmOS.

Caution:

1. Xiino Cruiser and its manual are properties of ILINX, Inc.
2. Copies of this software and manual are not permitted.
