KASPERSKY<sup>LAB</sup>

# Kaspersky Labs Products

In the battle against virus programs Kaspersky Labs is a renowned expert benefiting from over fourteen years of experience. Kaspersky Labs offers a wide spectrum of products designed to ensure information security: anti-virus software, firewalls, and anti-spam systems.

## Kaspersky® Anti-Virus

Kaspersky Labs anti-virus solutions provide dependable control over all potential sources of computer virus penetration and are intended for installation on workstations, file servers, Web servers, e-mail systems, firewalls, and handheld computers. Built-in system administration functionality makes it possible to maximize the automation of anti-virus systems protecting both computers and corporate networks. Kaspersky Labs products hold a complete collection of certificates and licenses affirming their high quality and reliability. Those who use Kaspersky Labs solutions receive daily anti-virus database updates as well as access to the most current information regarding virus programs.

### For Home Users

#### Kaspersky® Anti-Virus Lite

Simple to install, configure and use – ideal for beginners

#### Kaspersky® Anti-Virus Personal

The optimal collection of anti-virus technologies targeted at defending home computers

#### Kaspersky® Anti-Virus Personal Pro

All the latest anti-virus technologies working in concert to ensure the security of your computer

Easy  
to use

What  
everyone  
needs

For  
advanced  
users

### For Small and Medium Size Business

#### Kaspersky® Anti-Virus Business Optimal

Multi-platform anti-virus suite designed to protect small and medium size networks. It is a unique and flexible solution that allows you to choose any quantity of licenses in order to precisely meet your demands

Configurable  
solution  
designed  
to cut  
expenses

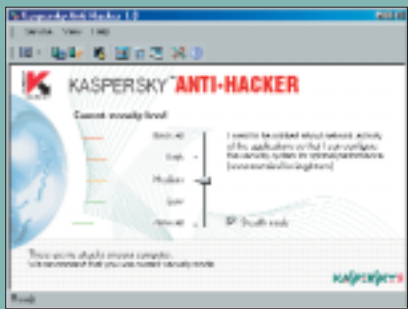

### For Corporate Customers

#### Kaspersky® Corporate Suite

Full-scale, multi-platform protection of corporate networks against external threats

Advanced  
enterprise  
solution

# Kaspersky® Anti-Hacker

The optimal system for dependable defense of home computers against hacker attacks and the prevention of unauthorized access to your personal data. The program is exceptionally simple to install and use and is the right solution for beginner users who need reliable protection.

Kaspersky® Anti-Hacker is a filter placed between personal computers and the Internet that checks all incoming and outgoing data streams and admits only safe data and actions. In this way the system defends against hacker attacks and also regulates the Internet access of installed applications, thus preventing information leaks, even in cases when a protected system is infected with the latest and most advanced Trojan programs.

# Kaspersky® Anti-Spam

Kaspersky® Anti-Spam is a cutting edge software suite designed to help organizations with small and medium size networks wage war against the onslaught of undesired e-mail (spam). The product combines revolutionary technology where the program linguistically analyzes message text, and employs all modern methods of e-mail filtration and a unique collection of services that allows users to identify and wipe out up to 95% of unwanted traffic.

Kaspersky® Anti-Spam acts as a filter installed at a network's gateway where it verifies incoming e-mail traffic streams for objects identified as spam. High effectiveness is achieved via a four-level multilingual (currently the software supports English, Russian, Spanish, French and German) analysis of incoming correspondence.

Kaspersky® Anti-Spam is set apart from other products by a unique collection of services. A team of linguistic experts guarantees daily database updates of spam samples, as well as continuously develops both new semantic examples and an "intellectual" kernel dedicated to spam identification. All this results in a solution providing users daily with new weaponry in the fight against spam that ensures a high level of detection of even the latest types of undesired e-mail.

Kaspersky Labs' products are recommended by many respected computer publications and holds many certificates from independent test labs:

**The Company Today.** Kaspersky Labs is an international software-development company offering advanced products for protection against viruses, hackers and spam. Founded in 1997, Kaspersky Labs operates four offices in Russia, France, the United Kingdom, the United States (CA), and distributes its products in 60 countries via a well-established partner network. The company consists of 250 highly qualified specialists, among whom 9 hold MBA degrees, 15 PhD degrees, and 2 are members of the prestigious Computer Anti-virus Researchers Organization (CARO).

**Unique Experience and Knowledge.** For fourteen straight years we have waged battle against computer viruses, allowing us to gain unique knowledge and skills that together represent our most valuable asset. Our in-depth experience permits us to foresee developing virus trends and to beforehand ward off attacks. This unique virtue has become a fundamental part of Kaspersky Labs products and services and enables us to always stay one step ahead of the competition and to provide our customers with the very best protection.

**Products.** Kaspersky Labs, through hard work and dedication has become a technology leader in the development of virus defenses. The company was the first to develop many technological standards in the anti-virus industry. Kaspersky Labs' fundamental product, Kaspersky® Anti-Virus, dependably protects all virus penetration points on stand-alone computers, workstations, file servers, Web servers, e-mail systems, firewalls and handheld computers. Convenient management features give the opportunity to maximize the anti-virus defense of computers and corporate networks alike. Clear affirmation of the high quality of Kaspersky Labs products is the number of respected data protection software developers that have chosen the Kaspersky® Anti-Virus kernel to drive their very own products, including Nokia ICD (USA), F-Secure (Finland), Aladdin (Israel), Sybari (USA), G Data (Germany), Deerfield (USA), Alt-N (USA) and Microworld (India).

**Comprehensive Technology Security.** Contemporary malicious programs are complex, multifunctional systems deeply integrated with the Internet. Traditional anti-virus methods are no longer enough to ensure reliable defense against external threats. Kaspersky Labs was therefore compelled to develop the personal firewall - Kaspersky® Anti-Hacker, and a unique spam filtration system designed for small and medium size business - Kaspersky® Anti-Spam. These products received the full benefit of our vast experience and expertise. The combined usage of our products achieves the maximum level of defense against virus code and other external data security threats.

**Services.** Kaspersky Labs customers get a wide spectrum of services guaranteeing the continuous trouble-free operation of our products and which precisely match their specific requirements. Users get round-the-clock technical support and daily anti-virus database updates. Organizations and enterprises benefit from a unique set of services made available in connection with the design, implementation and maintenance of anti-virus systems.
