

Macintosh PC Exchange 2.0

Now you can move files back and forth between your Apple Macintosh personal computer and an IBM or compatible personal computer as easily as you can between two Macintosh systems.

Macintosh PC Exchange is a time-saving software utility for those who work in a mixed-platform environment or need to exchange data files with people who use DOS or Windows systems.

With Macintosh PC Exchange, you can work with other disks in the same way you do with Macintosh disks. Just insert a DOS, Windows, OS/2, or Apple II ProDOS-formatted disk into your Macintosh system; Macintosh PC Exchange immediately displays the disk's icon on your desktop. The disk's contents appear as documents and folders that you can open, save, rename, move, copy, and delete—just like Macintosh files.

It's just as easy to move files from your Macintosh to an IBM-

compatible computer. Simply insert a DOS-formatted disk into your system—or let the Macintosh format one for you—and drag the files onto it. Then take the disk to a PC and begin working. It's that simple.

Now with Macintosh PC Exchange 2.0, in addition to floppy disks you can work with SCSI hard disks formatted under the DOS, Windows, OS/2, or ProDOS operating system, as well as with floptical, Bernoulli, and SyQuest removable media devices.

You can also customize Macintosh PC Exchange to automatically launch your favorite Macintosh applications when you double-click on DOS or Windows data files. For example, it can launch Lotus 1-2-3 for the Macintosh when you click on a file created using Lotus 1-2-3 for Windows.

Macintosh PC Exchange: It's never been this easy to work with DOS data files on a Macintosh.

Features

Ease of use

- The easiest way to move files between a Macintosh and an IBM PC or compatible computer
- Fast, simple click-and-drag installation

Compatibility

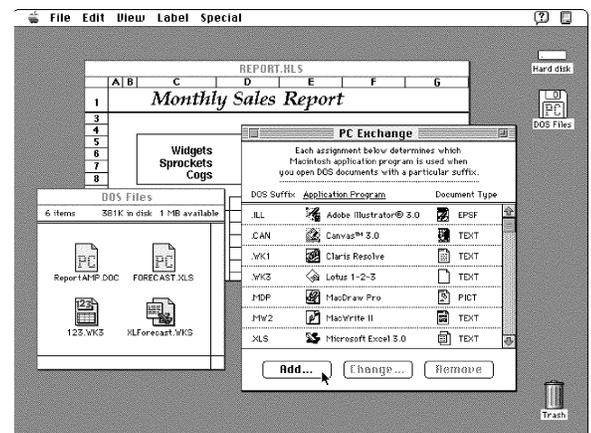

- Works with leading Macintosh applications
- Automatically recognizes floppy disks, SCSI hard disks, and removable media formatted using the DOS, Windows, OS/2, or Apple II ProDOS operating system
- Recognizes DOS-formatted drive container files created by the DOS

Compatibility Card for Macintosh

- Formats 3.5-inch and 5.25-inch DOS disks
- Formats 3.5-inch Apple II ProDOS disks
- Formats PC-compatible SCSI hard disk drives and removable media devices, such as Bernoulli and SyQuest cartridges and floptical disks
- Full System 7 compatibility
- A/UX compatible

Flexibility

- Handles DOS, Windows, OS/2, and ProDOS data files just like Macintosh files, allowing you to open, copy, rename, delete, and save documents and folders
- Allows you to open DOS, Windows, OS/2, and ProDOS data files from compatible Macintosh applications
- Lets you configure your system to launch a compatible Macintosh application when you double-click on a DOS or Windows data file

Macintosh PC Exchange 2.0

Technical Specifications

Disk compatibility

- 720K or 1.44MB 3.5-inch DOS disks
- 360K or 1.2MB 5.25-inch DOS disks (requires a third-party 5.25-inch floppy disk drive)
- 400K, 800K, or 1.4MB 3.5-inch Apple II ProDOS disks
- PC-compatible SCSI hard disks and removable media drives, such as Bernoulli and SyQuest cartridges and floptical disks

File compatibility System requirements

- Apple Macintosh computer with at least 3MB of RAM
- System 7
- Hard disk drive
- Apple SuperDrive or compatible floppy disk drive
- Compatible 5.25-inch floppy disk drive (required only for 5.25-inch DOS disks)
- Optional: SCSI hard disk or removable-media drive
