Apple Studio Display
and Studio Display with
ColorSync technology

It's time to change your view.

Apple continues to define the cutting edge in personal computers with the introduction of two new displays. The Apple Studio Display and the Apple Studio Display with ColorSync technology are a perfect complement to new Power Macintosh G3 computers. These stunning displays are a breakthrough in industrial design – as innovative as the work that you do on them.

Apple Studio Display

The Apple Studio Display is a 17 inch (16 inch viewable) display incorporating advanced Diamondtron technology for vivid colours and sharp text. The innovative design even allows you to store your keyboard under the monitor, giving you back your desktop. It's the perfect display for teachers, students, small business, and home computer use.

Apple Studio Display with ColorSync

This 21 inch (19.8 inch viewable) display incorporates advanced Trinitron technology for vivid colours and sharp text. The internal ColorSync-based calibration system is ideal for professionals who demand colour accuracy and consistency from display to display over time. Powerful software lets you set up the monitor for your particular application. Four USB ports built into the tilt-and-swivel base allow convenient connection of peripherals.
