

*Another year,
another revolution.*

Think different.

Introducing the new Power Macintosh G3 and Apple Studio Displays.

The new Power Macintosh G3 is built for speed.

With its faster processors—up to 400 megahertz—it outperforms the fastest Pentium IIs in high-end PCs.* An ATI RAGE 128 graphics accelerator (the first built into any computer) makes its 3D graphics rival those of PCs with a Voodoo2 add-in card.

The new Power Macintosh G3 gives you more in every way. It's the most powerful, expandable—and dare we say, revolutionary—Mac ever built.

The new Apple Studio Displays are as stylish as they are functional.

The 15-inch, 17-inch (16-inch viewable), and 21-inch (19.8-inch viewable) Apple Studio Displays are designed to complement the new Power Macintosh G3 in both appearance and performance, creating a totally integrated system.
