microTOOL directory branches on the CD-ROM

To whom it may concern:

We'd like to inform you about the structure and the contents of the microTOOL subdirectory on the CD-ROM. Please find enclosed the respective information.

Sincerely
microTOOL GmbH

Claus Horn

Our top-level directory – named "mTOOL" – contains three subdirectories, "case", "objectiF", and "Reader". They refer to our products **case/4/0** and objectiF as well as to the Acrobat Reader from Adobe Inc. used to display and print the booklets accompanying our products.

In the "case" subdirectory, the installation files for our widely-approved structured software development environment **case/4/0** V. 4.1d are to be found. This integrated CASE tool supports the development process with the well-proven methods of Structured Analysis, Entity Analysis, Structured Systems Design, and Relational Data Modeling. You can generate code for application development in C/C++, COBOL and Visual Basic.

In the "objectiF" subdirectory, you will find our brand-new object-oriented software development environment objectiF 2.0a. With objectiF, OOA and OOD methods are integrated according to Coad/Yourdon. The LAN repository of objectiF stands for safe multi-user operation. Further highlights are the fuzzy-logic based code editor that can assist you with code suggestions derived from the context of the current code sequence, effective tools that help you integrate existing code and class libraries into objectiF's object base, and objectiF's published OLE-Automation interface that makes our tool open to third-party extensions.

Both products come with a product-specific 20 page booklet in PDF format and, of course, with an extensive online help system.

If you want to have a look into the booklets, you must have Acrobat Reader installed on your system. If you don't have the reader already installed, change to the "Reader" directory on the CD-ROM, start the file ACROREAD.EXE by doubleclicking it and follow the instructions on the screen.
