

RESOLVED ISSUES IN ADOBE® PAGEMAKER® 7.0.1

February 2002

This section provides a small sample of the enhancements and resolved technical Problems included in this release of PageMaker. For information on specific issues not listed here, search Adobe's Support Knowledgebase at <http://www.adobe.com/support/database.html>.

System:

Expert Kerning can now be applied to Type 1 fonts in PageMaker 7.0.1 running on Microsoft® Windows® NT 4 and Windows 2000. [431152]

A Windows system with a large number of fonts installed will no longer return the error: "PM70 caused an invalid page fault in module Kernel32.dll at 0167:bff9db61," when exiting PageMaker 7.0.1 by clicking the 'X' in the upper-right corner of the PageMaker window. [442556]

PageMaker 7.0.1 no longer returns the error: "The Application 'Adobe PageMaker 7.0' has unexpectedly quit, because an error of type 1,010 occurred," when launching on certain Mac® OS systems. [447200]

PageMaker 6.0 files are now visible in the Open dialog box in PageMaker 7.0.1 for Mac OS. [447469]

PageMaker 7.0.1 no longer shuts down while choosing 'Display Master items', if the master page contains a text frame with text wrap applied. [436452]

PageMaker 7.0.1 does not shut down if an Adobe Table File is inserted in the publication. [427573]

OpenType Pro fonts no longer cause display problems in PageMaker 7.0.1 running on Windows operating systems. [435975]

PageMaker 7.0.1 no longer shuts down when making changes to stories in multiple documents using the Utilities>Change feature. [429965]

Library Files:

PageMaker 6.5 library files can now be opened in PageMaker 7.0.1 without returning an error. [495582].

Plug-ins:

Users who only saw three plug-ins listed in the PageMaker 7.0 Utilities>Plug-ins menu will see a full list of plug-ins after installing PageMaker 7.0.1. [448240]

Save for Service Provider:

PageMaker 7.0.1 now includes the report file when packaging on Windows operating

systems. [415117]

OpenType fonts are now packaged in PageMaker 7.0.1 running on Windows operating systems. [427248]

PageMaker 7.0.1 does not shut down when the notes included in a package contain a large amount of text. [480590]

PageMaker 7.0.1 does not shut down when packaging documents that contain an image on a master page. [435870]

Save for Service Provider can now preflight a PostScript file generated by PageMaker 7.0 and later on Windows operating systems. [479237]

Publication converter utility:

The PageMaker 7.0.1 Publication Converter no longer returns the error message, "Pm70.exe - Application Error" "The instruction at "0xef7d0df4" referenced memory at "0xe7d0df4." The memory could not be read," when attempting to convert PageMaker 6.5 documents with the "Replace publications" option selected. PageMaker 6.5 documents do not need to be converted using this utility, and therefore, are no longer listed when selecting documents to convert.[447029]

Converter for Microsoft Publisher and QuarkXPress:

Microsoft Publisher 2002 files saved in Microsoft Publisher 2000 format are now converted properly using the Converter for Microsoft Publisher/QuarkXPress. [478893]

The message, 'Cannot go to page', does not appear in PageMaker 7.0.1 when attempting to change pages in a document containing images that was converted from QuarkXPress to PageMaker and converted across platforms.[439108]

The error message, "This application requires a o486 CPU Processor or higher, with a minimum of 8MB of RAM to run," no longer appears when launching the Converter for Microsoft Publisher and QuarkXPress on a machine with an Intel® Pentium® 4 processor installed.. [455259, 460068]

Export PDF:

PageMaker 7.0.1 does not return the error message, "Cannot register Plug-in. Please re-install the plug-in component..." when exporting to PDF. [448240]

PageMaker 7.0.1 does not shut down when exporting a PDF to path made up of more than 98 characters on Windows operating systems. [483148]

PageMaker 7.0.1 files containing underlined TrueType text now retain the underlines when the file is exporting to PDF [487100]

The error message, "Can not find the AcrobatPPD. The plug-in requires the AcrobatPPD and is unable to continue." no longer occurs when exporting a PDF from PageMaker 7.0.1 with "Display PPD name" selected in preferences. [459927]

Microsoft WORD/RTF/EXCEL and Text:

Styled text imports without adding additional characters in PageMaker 7.0.1. [456324]

Special characters now import correctly from Microsoft Word into PageMaker 7.0.1. [475757, 465983]

Soft returns in Microsoft Word files no longer display as hard returns in the story editor in PageMaker 7.0.1. [474675]

PageMaker 7.0.1 only imports the Microsoft Excel cells selected by the user during the initial import when the link is updated. Previous versions of PageMaker would ignore the initial cell selection and import the entire Excel table. [483083]

Data Merge:

Tab Delimited Files can be used with the data merge feature in PageMaker 7.0.1. [455365]

Printing:

When you print to a PostScript printer or export to Adobe PDF from Adobe PageMaker 7.0.1, the Euro character is no longer substituted with a bullet. [440152]

Picture Palette:

PageMaker 7.0.1 will remember the location of library images stored locally instead of prompting the user for the location of each image when it is dragged from the Picture Palette. [421648]
