

## Magnet Tool

This is a limited version of the plug-in *Magnet Tool*.

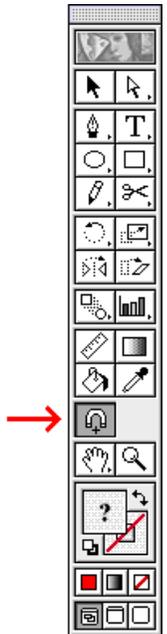

There is a version for both Macintosh and Windows for Adobe Illustrator 7.0. Put it in the Plug-ins folder that you are using for your Adobe Illustrator 7.0.

*Magnet Tool* is included in the plug-in package “ILLOM Toolbox 1” made by ILLOM Development in Sweden.

The *Magnet Tool* plug-in adds a tool to the tools palette.

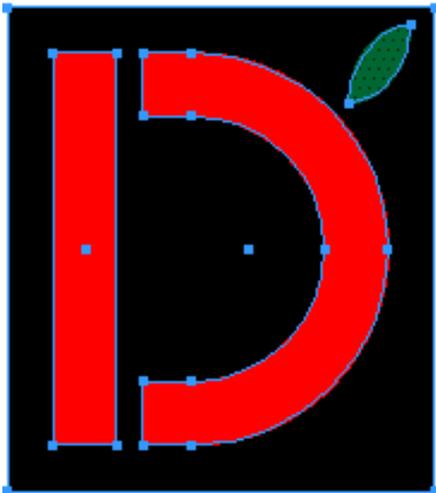

When using the *Magnet Tool*, all selected points/handles will be moved towards the cursor position. The movement is done while you are holding down the mouse button. The longer you hold it down the longer the points will move. You can also move the mouse while holding down the mouse button and the points will move towards the current position of the cursor.

You can change the direction the points/handles are moved by holding down the **alt** key on your keyboard. When holding down the **alt** key the points/handles will move away from the cursor position instead of towards it.

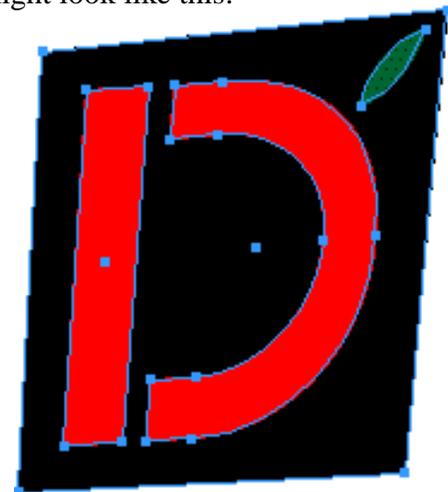

First, select some points/handles.

Then move the mouse to a position where you want the points to move:

Press the mouse button and the points will start to move towards the mouse position. If you hold it down a while the logo might look like this:

Also try to move the mouse around while holding the mouse button down and see what happens!

The full version of this tool included in the “ILLOM Tooldbox 1” package has settings where you can f.ex. set the speed that the points/handles will move with and if the magnet effect should be reduced if the point/handle is far from the cursor instead of close.

The plug-in package “ILLOM Toolbox 1” and the plug-in “Magnet Tool” is developed by:
