

## **NOTES ON THE FORMATTING**

*Brock's Birds of Indiana* is presented in pdf files, which are stored in folders.

The folder entitled “Introductory Stuff “ contains explanatory files and regional maps. Within this folder various tools used in the Species Accounts section are described in detail. For example, details of the histograms are contained in a file called “Histograms.pdf.”

All other folders contain files about birds. Each species is described in a file bearing the bird's name. These files are grouped in folders. An upper-case letter precedes both the folder and the file name. These letters allow the files and folders to be arranged in AOU order.
