

SPECIES ACCOUNTS: Status Table

The physical evidence for each species' occurrence in the state is given in this section along with a listing of specimens housed in various museums. Known specimen locations are tabulated in the Status Table.

Abundance information is succinctly tabulated in the "20-Year Abundance" section of the Status Table. Employing the numbers defined in the Abundance section, this table lists seasonal abundance codes for three tiers of counties. Consider the winter season in the example Status Table. In this example the "n" indicates no records (over the past 20 years) in the northern tier, the species is Accidental (10) in the central tier, and Occasional (9) in the southern tier. The bottom row provides a composite assessment for the entire state; in this example the species is Occasional (9) during winter for the state as a whole.

STATUS TABLE				
Specimens				
Museum				No.
National Museum of Natural History				1
20-Year Abundance Table				
	Win	Spr	Sum	Fall
Northern Tier	n	5	6	4
Central Tier	10	7	8	9
Southern Tier	9	7	6	7
Entire State	9	5	5	4
