# competition

We'll take this month's winner from page to screen and back again with a double first prize of an Epson GT-5000 flatbed scanner and an Epson Stylus Color II inkjet printer. And for twenty runners-up we've ASAP WordPower, the world's first visual word processor from Software Publishing Corporation

If you're not the sunbathing kind, you'll be looking for a good excuse to keep you pale and interested indoors through the (potentially) hot and bothersome summer months. And we've got just the thing. A double first prize in the great shape of an Epson GT-5000 scanner and an Epson Stylus Color II inkjet printer. Plus, twenty runners-up will each receive Software Publishing Corporation's ASAP WordPower, just the prize to spice up your presentations.

First prize

Epson's new GT-5000 entry-level flatbed scanner provides fast, efficient 24-bit colour scanning at an optical resolution of 300 dpi.

The versatile GT-5000 will meet the needs of the new, inexperienced user, but is also just as effective in the professional business environment.

Among the innovative features, Epson's Twain Utility presents the novice with a quick-start, no-fuss approach: simply select 'Easy' mode and click the 'Scan' button on screen. More experienced users will appreciate the Advanced Twain option for more sophisticated image control.

Furthermore, Epson's Text Enhancement Technology improves the accuracy of OCR scanning by allowing users to scan text on coloured or printed backgrounds.

To complete the picture, the GT-5000 comes bundled with Corel Photopaint 5, Corel Draw 4, Xerox Colour Document Management Suite and Textbridge OCR software.

What goes in, must come out, and what better way to get your images from screen to paper than with the Epson Stylus Color II inkjet.

A runner-up in June's *What PC?* Printer awards, the Stylus Color II is a four-colour printer. This means it produces 'true' black, instead of a mix of its cyan, magenta and yellow inks.

Ideal for frequent colour printing of DTP and graphics, the Stylus Color II has a print performance of two pages per minute in colour, and a maximum text output in mono of four pages per minute.

The Stylus Color II can achieve stunning photorealistic quality with its 720 dots-per-inch resolution; as our reviewer noted, 'it remains one of the few inkjets that can produce colour prints of breathtaking clarity.'

Runners-up

For 20 runners-up, we have what is probably the most exciting new program for Windows 95 that we've seen so far this year.

ASAP WordPower from Software Publishing Corporation is by far the easiest way of adding stunning visuals to reports, presentations – and even e-mail and Web pages.

Unlike most presentation graphics programs, Word-Power can be learnt in just a few minutes because it has 'Intelligent Formatting' technology that takes care of all the design decisions for you.

But, what makes WordPower different is the number of ways you can use a finished presentation: as an easy way to include graphics in a report; you can send a complete working presentation by e-mail; and you can even embed WordPower presentations into Web pages. If all you want is presentation graphics in minutes rather than hours, WordPower beats the opposition hands down.

How to win

Simply answer these questions, and complete the tie-breaker below:

1 Which feature of the Epson GT-5000 improves OCR scanning?
2 At what resolution does the Stylus Color II inkjet print?
3 What technology makes Word-Power so easy to learn?

Tie-breaker...

This summer, I would rather spend my time printing and scanning than swimming and tanning, because...
